1. WELCOME TO THE CHAMP ASSOCIATION

Beyond development of Bitcoin as the first application of blockchain technology, different applications have been developed to equip enthusiasts with digital assets that enable decentralized monetization practices inside an economy. Structured experimentation of such blockchain solutions have enabled innovative companies and individual enthusiasts to get good returns on their investment. From the use of smart contracts and blockchain technology to create DeFi applications (DEXs, staking, yield farming, NFT marketplaces, DAOs, lending protocols, etc), the blockchain market size is set to grow more than \$163 billion by 2027.

As these applications are developed, developers unlock the potential of protocols, thus aiding in faster adoption of blockchain solutions. Cryptocurrencies, NFTs, and other digital rarities are at the center of applications within blockchain technology; thousands of these digital assets have been developed and are currently in circulation. However, many cryptocurrency/NFT holders have been unable to make good returns on their investment due to the purchase of non-valued tokens and NFTs. As the inclusive importance of a digital asset is derived from its value, a large percentage of these digital assets are developed with no inherent value.

Hence, Champ Association is being developed as an integrative platform with unique clubs of likeminded individuals who aim to make the best out of the blockchain industry. Utility reward protocols enable members to obtain cryptocurrencies and other digital assets while gaining access to utility-enabled clubs in a bid to generate increased value for their holdings. Bottle-sale protocols reward digital assets supported within our established bottle branding network; as bottles sell, percentages of the profit are utilized to market-buy the crypto asset displayed on the bottle, which is then distributed to the node utility reward pool. The assets received by members can be leveraged for wealth opportunities within the organization via locking mechanisms and node protocols. Upon making wealth via utility protocols per bottle-sale milestone, members can celebrate with their luxurious branded bottles of Crypto Champagne.

Our structure design improves how people can benefit from the ecosystem, by providing them with utility-enabled digital assets, while maintaining all sub-entities in the association. Champ Association leverages the Polygon network to uphold the systems in the organization and enable easy possession or transference of assets.

2. BLOCKCHAIN TECHNOLOGY

Blockchain technology is a decentralized public ledger that records and duplicates copies of transactions across its entire network of computers, which is then added to each participant's ledger. Every block in the chain contains several transactions, and each time a new transaction is validated by nodes on the blockchain, the block records and confirms the time and sequence of the transaction while following all utility protocols enforced by the foundation within the token smart contract — this is most important, as it ensures the vision of both founders is carried out autonomously without error.

In essence, when a transaction occurs in properly functioning blockchain networks, an irreversible block is formed from the processed smart contracts. This block contains a unique hash, essentially the time stamped batches of recently validated transactions, separate from the hash of the previous block to prevent any block from being altered.

As such, a hacker would only be able to manipulate the block by also manipulating all other blocks and the consensus stamps of the distributed network. With it being nearly impossible to refute the consensus of all nodes on the network, blockchain technology is considered unalterable and immutable. Since the development of Bitcoin's blockchain, various blockchains have been developed, with each building on the inadequacies and limitations of previously developed chains that cannot adapt to the continuously growing smart contract demands of web3 businesses.

Hence, the Elysium network is leveraged to develop the Champ Association network due to its high-ended scalability properties, extremely fast transactions per second, and its flexible network for the creation of high-ended decentralized applications.

A. Leveraging the Elysium Network

Elysium Network is the native DLT utilized by the Champ Association, a layer-1 carbon-friendly blockchain created by the Vulcan Forged foundation, and all smart contracts on-chain must utilize \$LAVA or \$PYR to be signed by digital wallets

Most layer-1 blockchain networks have scalability and efficiency issues – low throughput, high gas fees, and lack of community governance. All of these inadequacies were highly considered when Vulcan Forged developed the protocols supporting the Elysium Network, resulting in a secure smart contract operating system enabling more than 2,500 transactions per second. These speeds greatly outweigh competitors, such as the Ethereum Network at 15-30tx per second, and slightly outweigh credit card transactions that fluctuate between 1,500-2,000tx per second.

To reduce overall gas fees and keep the network cost-affordable for developers and businesses building solutions on-chain, Elysium Network incorporates a dual-token economy. The two tokens are \$PYR, which is used for governance and utility purposes, and \$LAVA, which is used for transaction fees (also known as ‘gas’) and for their play-to-earn system. By segregating governance and gas utility functions, a dual-token economy insulates the network from market instabilities, promoting long-term sustainability.

Another great feature that Elysium Network can offer is fee delegation, to enable businesses to sponsor the \$LAVA gas fees required to sign smart contracts with digital wallets for gaining access to platforms or purchasing phygital and non-phygital products. Having the ability to let clients pay for smart contracts and products with a credit card, while all crypto token requirements are sponsored by the business building on-chain, ultimately allows adoption for the services being utilized with blockchain technology to be adopted at much faster rates.

Remember when we said carbon-friendly?... Just like us, Vulcan Forged cares about the environment and future of the world our generations will come to inherit. Hence, the desire to be a carbon-neutral blockchain that plants trees to counteract the carbon emissions resulting from utilizing the Elysium Network. All of these reasons, beyond others, are why we chose to build with Vulcan Forged on Elysium Network!

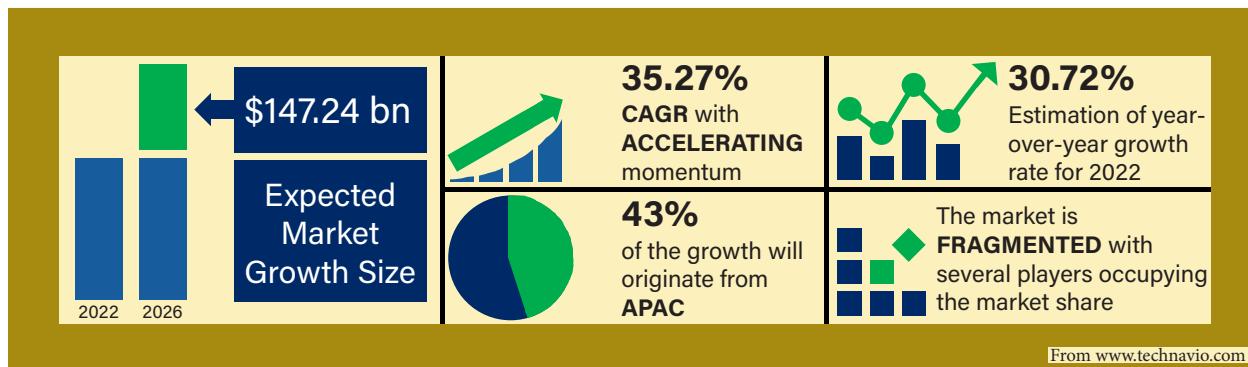

3. BRIDGING TWO WORLDS: THE MARKET OPPORTUNITY

A. Blockchain Market Data

Cryptocurrencies are some of the most owned digital assets in the world, even though there are less than a few hundred-million vested individuals in the year of 2022, causing the potential of exponential returns to be tremendous for assets that contain inherent value as the rate of global adoption increases yearly. In a survey carried out by Binance, the crypto user index shows a 97% confidence in cryptocurrency acquisition. An increase in acquisition is also significantly showcased in the number of people with cryptocurrency wallets.

As of Q3 2022, Blockchain.com wallet reached over 81 million Bitcoin wallet users alone, thus showcasing the significant growth of the market. According to CoinMarketCap, the overall cryptocurrency market capitalization was pegged at over \$1 trillion on July 24th, 2022. Similar to the cryptocurrency market, the global NFT market has shown a steady and continuous growth rate since its inception. Though the creation of digital assets are constantly increasing, most of them do not provide the expected returns, so it is hard for investors to determine which have true value.

According to a research report by Invest in Blockchain, less than 50% of cryptocurrencies provide any useful function or real value. Among the top 100 most valuable cryptocurrencies by market capitalization, only 36% were found to have working features. Even so, there is no inclusive community to enhance the sustainability of blockchain projects or drive value to them. Not only have the projects in this category caused a lot of enthusiasts to lose the value of their holdings, but they have also slowed down the faster adoption rate.

According to the latest market report by Technavio, the industry is expected to grow more than \$147.24 billion by 2026, thus showing a CAGR of 35.27%. Amongst others, a report by YahooFinance stated that the key factor driving the global NFT market growth is the continuous and increased demand for digital artworks. This increased demand has also enhanced trading on OpenSea. According to CNET, around 250,000 people trade NFTs on OpenSea, with 23% of traders being millennials who prefer to own artworks and collectibles on the blockchain.

B. Champagne Market Data

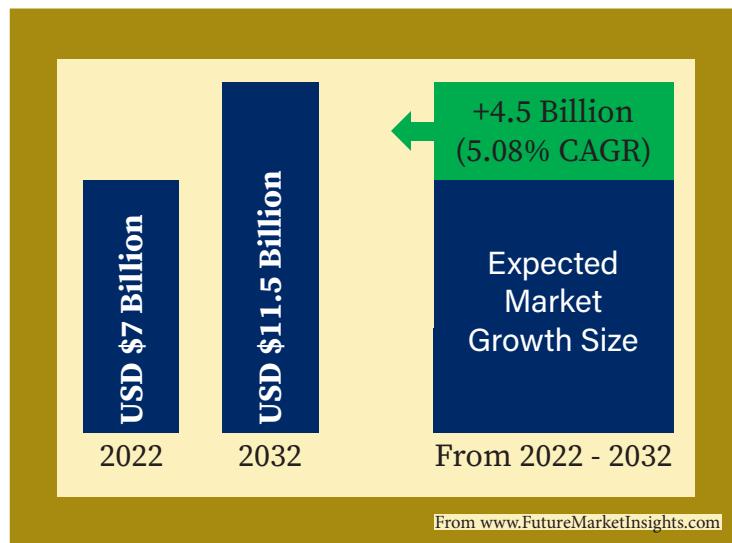

Market data accumulated over previous decades prove that the total export value of champagne from France has steadily increased. To be exact, Statista reported that export value increased from 1.8 billion euros to 2.6 billion euros during the 2003-2020 era. Between the years of 2009 and 2018, the volume of champagne exported from France increased by 242 thousand hectoliters. During the 2019-2020 champagne campaign, exports dropped due to unexpected circumstances and unforeseeable droughts. However, in 2021, the industry made a strong comeback by selling 322 million bottles – an increase of nearly 8% from 2019, which is a more realistic year to compare data, and an increase of sales by 32% from 2020. The year of 2021 set an export value record for the champagne industry, accumulating to a total of 5.5 billion euros.

Ultimately, researchers have noticed that champagne producers are able to charge more for their product when exclusive perks are associated with the bottle, which explains why more revenue was obtained while less bottles were sold. Another piece of evidence that shows champagne consumers share a strong focus on the importance of brand identity and inclusive organizations was obtained by a team of researchers at the University of Adelaide, Australia. The survey reports that purchasing specific brands represented in the identity of a special occasion was common, implying that champagne houses can capitalize on establishing brands that cater to a range of niche genres and styles.

On July 14th of 2022, Giovanni and Piero Buono purchased a single bottle of *Château Avenue Foch 2017* for \$2.5 million at an auction. The champagne bottle included 5 separate NFTs – the Bored Ape and Mutant Ape NFTs were the two rarest of the five. Inclusion of these rare NFTs is what ultimately drove the auction sale to millions of dollars, further proving that there is huge market for champagne brands that include exclusive NFTs and digital assets with the bottles sold. Reports state that the Buono brothers plan to keep their NFTs secure on a private wallet while the bottle remains sealed to allow their investment to gain value overtime.

“Wealthy people will look for places to store their wealth for a while—and that could be a champagne with an NFT attached to it” — Mr. Buono.

According to Future Market Insights, the champagne market accounted for 10% of the total global alcoholic industry in 2022 — FMI experts predict the percentage to rise due to changes in consumer lifestyle and increase in disposable income. As the desire to live a healthy lifestyle began to increase across the globe, studies were made by numerous institutions to determine which alcoholic beverages are best for consumption, and recent studies prove champagne to be a healthier alternative to hard liquors. Rather than putting heavy strain on the cardiovascular system, antioxidants within champagne are known to reduce bad cholesterol, avoid the formation of blood clots, and help avert damage previously done to blood vessels.

The global champagne market is expected to reach a market valuation of \$7.0 Billion by the end of 2022, accelerating at a CAGR of 5.08% by 2022-2032, to reach a value of \$11.5 Billion by 2032.

4. FOUNDERS AND DEVELOPERS

Tyler Doussan

Co-Founder/CEO/CTO

Blockchain fanatic, entrepreneur, and tokenomics specialist who engineered the token release schedule and utility reward protocols of the Champ Association.

Tyler is a creative innovator, fascinated by inventing novel tokenomic concepts and financial metaverse economies.

Birgen Jansseune

Co-Founder/COO

Business coordinator, commercial marketing enthusiast, and B2B2C sales manager who has extensive background in customer relations and employee management.

Birgen is a motivated and organized project manager who has many years of experience in traditional sales.

Labrys is one of Australia's oldest and most experienced blockchain development agencies with a laser focus on blockchain technologies from day one and over five years of experience in the blockchain industry. Labrys is a growing Brisbane-based business working with major global organizations. The team is made up of some of the brightest minds in the industry and their expert of engineers of future systems develop smart contracts, web2/3 platforms, mobile apps, MVPs, POCs, tokens, NFTs, layer-2 scaling solutions, wallet integrations and more.

5. MISSION AND VISION

THE MISSION

To enrich the lives of others by developing phygital events, gaming platforms, and crypto clubs that can only be accessed with the possession or transference of \$VIGNE tokens and/or NFTs.

OUR VISION

Create an inclusive infrastructure and distribute a percentage of the profit from utility reward protocols to members of the association.

Accessibility to events and sectors of the Champ Association will be payable in fiat or credit/debit cards. All forms of payment will be converted to \$VIGNE tokens to follow utility reward protocols of the ecosystem. To prevent misdelivery of \$VIGNE as payments are being processed, smart contracts will be audited before deploying them on the blockchain to enable public commerce gateways.

6. THE SOLUTION

Champ Association is being developed as an inclusive ecosystem to enrich the lives of people through its integrative subsidiaries, all which interact together to provide value to the ecosystem's underlying \$VIGNE token and the issued NFTs. The association integrates established clubs where people can interact while also earning good returns from their interaction. In essence, users who want to access the clubs or phygital events must utilize \$VIGNE tokens or own/rent specific NFTs of Vineyard Vocations and other approved metaverses within the Champ Association — newcomers that are not experienced in blockchain technology can pay with a credit/debit card and the admission fee will be contracted to market-buy \$VIGNE from the Champ Association.

All traditional businesses, web3 companies, incubation project developers, and individual cryptocurrency enthusiasts can access the Champ Association's integrative subsidiary features by paying the required fees. The majority of all services, event admission fees, gaming platform contracts, NFT marketplace transactions, or any other fees and transactions associated with the Champ Association and subsidiaries will utilize \$VIGNE in some manner — the portion of service or transaction fees intended for each subsidiary/business will be rewarded in fiat while the portion intended for \$VIGNE and cryptocurrency brand utility is contracted towards market-buying the digital assets required to follow utility protocols. For example, when a customer purchases a Rare Luxury BTC bottle from Crypto Champagne for €600, the company keeps €270 while utilizing the €250 to market-buy the \$VIGNE and \$BTC tokens required from the holding company (Champ Association).

A. How is \$VIGNE Acquired?

\$VIGNE tokens are acquired by purchasing a Rare Luxury Bottle and/or Exotic Luxury Bundles of Crypto Champagne – DeFi applications of the association will enable users to leverage their tokens and NFTs by locking them within time lapse smart contract pools for variable or fixed utility rewards.

B. Why Champagne?

Rather than only having association members hold tokens and access various usability features to drive value and increase returns, the Champ Association also integrates a success celebration mechanism wherein users can celebrate a milestone or an increased income generation with their branded bottle of Champagne – the Champ Association is built on the ethos of wealth creation through valuable digital asset ownership and success celebration.

Cuvée Vulcan Forged - Luxury

C. Champagne and its Development

The champagne products developed by the association had to be different from existing market products. It had to be a product that gives a true feeling of achievement and success. Hence, the search for Champ Association's champagne producer began. The founders of Champ Association prospected producers with quality services, innovation, a strong network of farmers, international distribution experience, family character, and the willingness to attach NFC chips to each bottle for validating the authenticity of order contents.

After a long search and many pleasant tastings, a producer who met all the listed conditions was found. The producer is stationed in France, within the district of Reims. Their extensive network of farmers guarantee that resources will always be available to produce the demanded amount of champagne required by the Champ Association. Additionally, the producer is accompanied by a network of logistic corporations that will sell and ship champagne worldwide when required.

Without denying the ancestral know-how and having been in business for several generations, the chosen producer looks for emerging techniques that constantly improve their fantastic quality – hence the desire to work with Crypto Champagne and the Champ Association.

With the collaboration between Champ Association and the producer, the ecosystem's champagne was branded 'Saint Charles'. Champ Association is convinced that merging consumable champagne, digital assets, and gamification protocols will provide an atmosphere sought by those actively seeking revolutionary blockchain organizations.

Cuvée Bitcoin - Luxury

7. SUBSIDIARIES IN THE CHAMP ASSOCIATION

The subsidiaries in the Champ Association ecosystem contribute to the sustainability of the Association and inclusive user experience. They facilitate the ecosystem's needs while maintaining compliance with global legal regulations. Much more, they contribute to the growth of the \$VIGNE tokens and NFTs, thus ensuring that every category of user can acquire wealth.

Some subsidiaries within the Champ Association platform are granted a percentage of the total token supply which will slowly be replenished through the reflection protocols. In return, the reflection protocols will be controlled by the product's order volume and population demands, thus enabling the ecosystem to function as intended.

The major subsidiaries include: Crypto Champagne, Bubblestar, the Token Generator, the Gaming Studio, and the Membership and Club Design.

A. Crypto Champagne

Crypto Champagne is an inclusive platform in the ecosystem that leverages various types of established and value-oriented cryptocurrency projects to enhance the value of the Champ Association and its underlying \$VIGNE token. These cryptocurrency projects are considered as brands, and Champ Association members can own them by purchasing Rare Luxury Bottles and/or Exotic Luxury Bundles of Crypto Champagne.

In essence, this platform decorates bottles of Champagne in the brand identity of various crypto projects; bottles can be designed with the 'ETH' logo, the 'BTC' logo, or any other brand supported by the Association.

Some of these projects include: Champ Association (\$VIGNE), Vulcan Forged (\$PYR), Bitcoin (\$BTC), Polygon (\$MATIC), XRP (\$XRP), Binance (\$BNB), Ethereum (\$ETH), VeChain (\$VET), Lukso (\$LYXE), Solana (\$SOL), Dogecoin (\$DOGE), Safe Haven (\$SHA), Decentraland (\$MANA), Shiba Inu (\$SHIB), and two other brands TBA.

To members, the designed bottles can either be considered as exclusive merch, a collector's item, or an item for consumption. Depending on the type of bottle purchased, Champ Association members can own \$VIGNE tokens and the tokens of the cryptocurrency brand they love.

Cuvée Ethereum - Luxury

How Crypto Champagne Works?

Crypto Champagne is a non-traditional branch of the organization that white labels bottles to properly represent cryptocurrency projects and the products within their ecosystem. Hence, one bottle of champagne may be branded after Bitcoin (\$BTC), while another bottle may be branded after Binance Coin (\$BNB) – i.e., members who like \$BNB may decide to purchase the Binance bottle in honor of their love for the brand. Aside from displaying the cryptocurrency of projects, the whitelabeled bottles may also be used to represent certain products in the ecosystem, including metaverses that individuals can access using the tokens from their purchase of luxury champagne bottles.

In essence, champagne bottles are whitelabeled to represent brands and products in the Champ Association network. There are different categories of whitelabeled bottles, and each type will have its own usability advantage depending on their level of luxury. Some bottle types are not equipped with digital assets showcased for brands, while other bottle types allocate an NFT with x amount of \$VIGNE and brand tokens to the member for providing access to clubs or events within the ecosystem.

How the Crypto Champagne company prepares for bottle-sales to get champagne bottles available for sale:

- BubbleStar purchases champagne bottles from our producer to apply the design.
- Crypto Champagne purchases the branded bottles from BubbleStar.
- Crypto Champagne sells branded bottles in the Champ Association platform to consumers.
- Crypto Champagne market-buys the number of required tokens for each bottle brand that is purchased during threshold sales.
- Distributor ships the bottled product and purchased tokens are airdropped to the wallet address specified during checkout.

Cuvée XRP - Luxury

Categories of Bottles and their Usability Features

There are two categories of champagne bottles: Sleeve and Luxury.

Sleeve Bottles – These are bottles with no cryptocurrency or NFTs included. Members who purchase any of these bottles will not get cryptocurrency or NFTs. This category of bottle is for the average consumer who wants to buy multiple bottles of Crypto Champagne in order to drink it on a regular basis.

- Simple but elegant finishing layout.
- The bottle is covered with a sleeve on which the design is printed.
- An NFC chip for authenticity of ordered contents and product manufacturing.
- The capsule concealing bottle has a smooth satin finish.
- Less vibrant taste than the luxury bottles, but bubbly enough to please.

Luxury Bottles – The luxury bottle category is a better option for members looking to own cryptocurrencies and NFTs. In essence, these are champagne bottles with cryptocurrencies and/or NFTs included. Common, Rare and Exotic Luxury Bottles come with a Character and/or Multiplier NFT – the grade of rarity depends on the bottle purchased. Some bottle sales may also include other NFTs that can be utilized to access primary features of the Champ Association or leverage them on the DEX to earn passive income within yield farming and staking pools.

- Pristine and luxurious finishing layout.
- The bottle is painted and screen printed with branding; different than sleeve.
- An NFC chip for authenticity of ordered contents and product manufacturing.
- The capsule concealing bottle has a luxurious embossed finish.
- More exquisite taste than the sleeve bottle, a bubbly finish to remember.

CHAMP ASSOCIATION
ENRICHMENT BY BLOCKCHAIN

Cuvée Binance - Luxury

Sleeve and Luxury bottles have different tastes and designs. The sleeve bottle has a plastic design wrapped around the glass, while the luxury bottle has its design painted on the glass with a metal label covering the NFC chip. Both bottle categories can either function as exclusive merch in the collector's inventory or an item for consumption.

The Crypto Champagne company is the most important sub-entity in the Champ Association because it contributes to the growth of other sub-entities while providing an inclusive user experience for association members.

Brand Application Payment Methods

Each time Crypto Champagne enters new brands within the bottle network and sell bottles, the multi-faucet utility reward pool is rewarded a portion of the application fee and revenue derived from bottle sales. A total of €25,000 will be charged to the Brand at the end of each fiscal year until new negotiations have been made, of which 10% will be allocated to the multi-faucet utility reward pool; the addition of each brand will award the multi-faucet utility reward pool with €10k upon the initial entrance and a reoccurring yearly maintenance fee of €2,500.

Brand Application Payment Methods – Either of the two payment methods may be chosen by interested brands:

- Upfront Payment = €50k**

Brands are encouraged to pay an upfront lump sum to enter the network at a discounted rate.

- Split Rewards until Paid In-Full and €10k Upfront = €75k**

At the end of each bottle threshold sale, the bottle branding utility rewards will be equally split. Half is paid to the Champ Association, until the €75k bottle branding fee is paid in-full, and the other half remains in the bottle branding application fee wallet to follow the utility protocols as stated above. Additionally, to ensure the multi-faucet utility node reward protocols do not falter, no less than €10k must be paid upfront by all brands entering the network.

Utility Reward Distribution Protocols

Each time a single bottle is sold, the designated Euros (€) will be utilized to market-buy the cryptocurrency brand represented on the bottle to be distributed throughout the ecosystem as follows:

Entity being Rewarded	Sleeve Commision	Common Luxury Commision	Rare Luxury Commision	Exotic Luxury Commision
Multi-Faucet Utility Nodes	Sleeve = €6	Common = €10	Rare = €18	Exotic = €30
Flagship NFT Land Owners	Sleeve = €6	Common = €10	Rare = €18	Exotic = €30
Cryptocurrency Brand	Sleeve = €3	Common = €5	Rare = €9	Exotic = €15
DEX Staking/Farming	Sleeve = €3	Common = €5	Rare = €9	Exotic = €15
Affiliate (if applicable)	Sleeve = €1.50	Common = €2.50	Rare = €4.50	Exotic = €7.50
Total Utility Rewarded per Bottle-Type Sold	Sleeve = €19.50	Common = €32.50	Rare = €58.50	Exotic = €97.50
Total Revenue to Champ Association per Sale	Sleeve = €44.50	Common = €237.50	Rare = €291.50	Exotic = €392.50

Delivery of Bottles and Airdrop of Tokens

Bottles: VAT/Tax and other fees related specifically to shipping products to another region/county will be paid by the consumer separately at checkout. All luxury bottles will be delivered in 6 to 9 months from the date they are purchased, while sleeve bottles will arrive much earlier. The consumer will be able to pay extra to have any sleeve bottles ship separately when they are ready for delivery — those who do not pay the extra fee must wait for their sleeve bottles to arrive with luxury bottles.

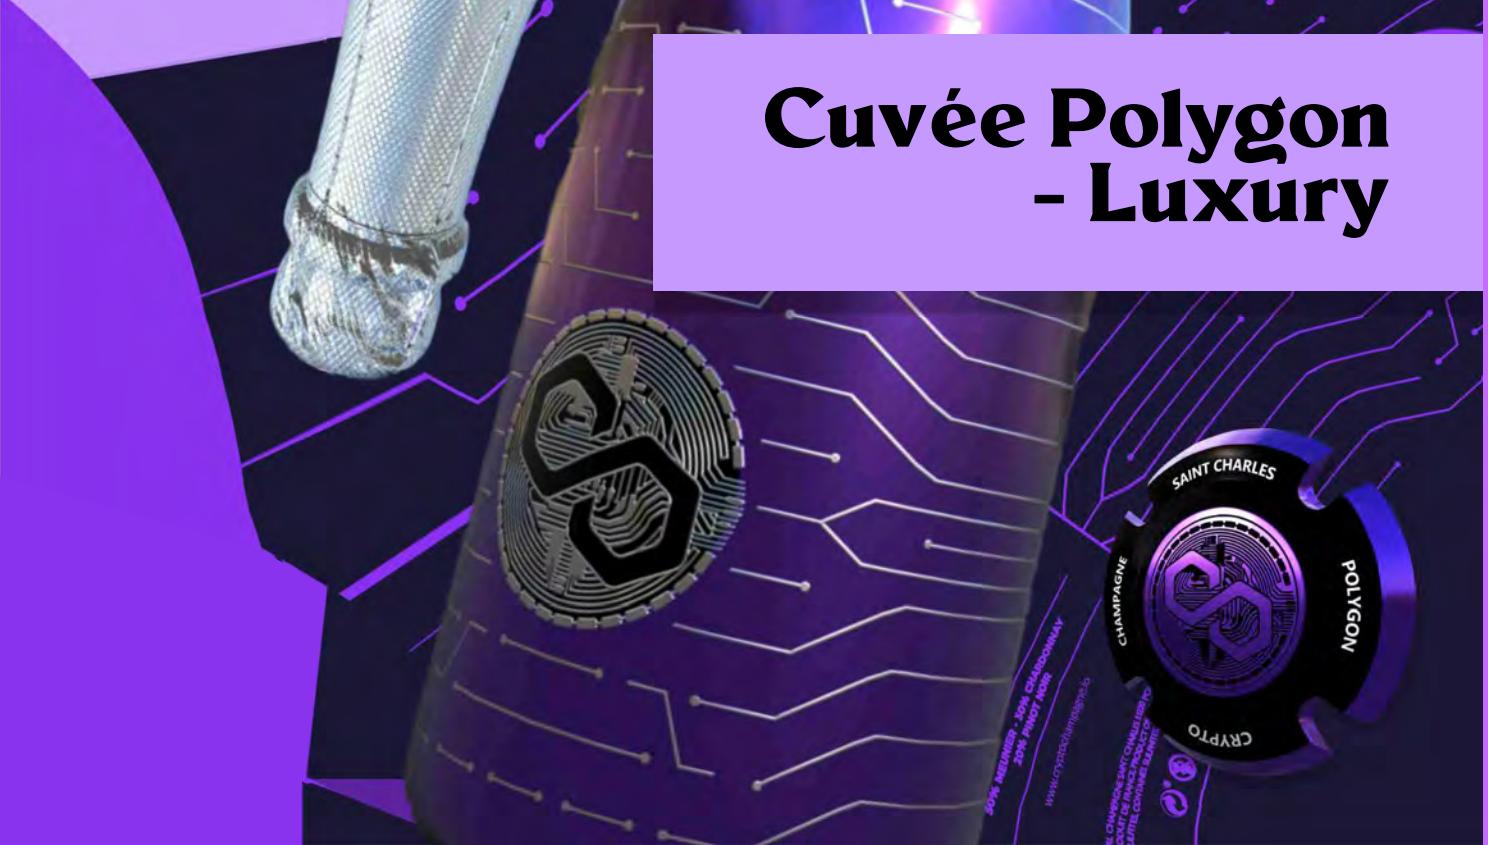

Shortly afterwards the first bottle threshold sale is sold-out, our association will aim to ensure products are available for same-day/next-day shipping during future bottle threshold sales. Reason being that the first sale will provide the mass funding required to pre-brand hundreds of thousands of bottles. Once we have ample branded inventory, then warehouses can be filled globally.

CHAMP ASSOCIATION
ENRICHMENT BY BLOCKCHAIN

Cuvée Polygon - Luxury

Tokens: All utility tokens will be airdropped to the consumer's whitelisted digital wallet address after the token contract of \$VIGNE has been successfully deployed on Elysium chain and audited by numerous trusted firms. The same will apply for the utility tokens of each cryptocurrency brand that are airdropped to consumers because we will utilize a pegged form of each token on the Elysium blockchain to ultimately ensure gas remains the same for all cryptocurrency token transactions, which is greatly beneficial to the Vulcan Forged economy because each tx will utilize \$LAVA. Additionally, all NFT rebate rewards will be airdropped as soon as they are minted on Elysium chain. After the first bottle threshold sale, all corresponding threshold sale smart contracts will instantaneously airdrop rewards since they will be minted before the sale, thus leading towards an immutable and autonomous process upon each purchase.

B. BubbleStar

BubbleStar is a traditional company within the Champ Association that manages facilitations between distributors and Crypto Champagne to ensure all bottles are created by each brand's identity. Hence, if the Crypto Champagne company needs a thousand \$BTC branded bottles of champagne, BubbleStar will be responsible for every production.

Furthermore, the organization white labels bottles of Champagne to properly represent corporations, events, brands, or entities requesting personalization. This involves setting up bottles specifically for events that do not include cryptocurrencies or NFTs – weddings, birthdays, birthing ceremonies, and other types of traditional events. In essence, the BubbleStar company is not only responsible for creating champagnes for the Association but also for external traditional partners/clients.

In certain instances, if a traditional partner/client wishes to have NFTs and an ICO tied to the white-labelled bottles, resulting in unique NFTs and a token supply with inclusive value, such client would have to pay additional fees. Basically, external cryptocurrency projects can leverage the Champ Association to create their tokens/ NFTs and have them linked with bottles of Champagne.

CHAMP ASSOCIATION
ENRICHMENT BY BLOCKCHAIN

Cuvée Safe Haven - Luxury

These bottles of Champagne may be sold on the ICO pre-launch date for investors to celebrate their glide into a resourceful project. By buying these bottles, the investors would also get to own prereleased tokens/NFTs. Whether BubbleStar provides its services to individual entities in the Champ Association ecosystem or for external incubation projects, the company owns the rights to the household collection name and the collection name will be inscribed on all bottles sold by Crypto Champagne.

Saint Charles, one of many blends within our bottle network:

Original Blend: 55% Meunier, 35% Chardonnay, and 10% Pinot Noir

Aging on Lees: 24 to 42 months

Dosage: 7.8gr

Life Expectancy: 2 to 4 years

Tasting Temperature: 8 - 10°C (46.4 - 50°F)

Elegant and Exquisite Color: pale yellow with white gold reflections, beautifully sparkling when poured, forming a fine and lasting bubble.

Exotic and Sensational Smell: sharp and complex aroma with a discreet fruity undertone (citrus fruits) that slowly transitions to floral and light brioche overtones.

Earthy and Fruitful Taste: nice balance between herbal/fruit flavors of stone fruit (mirabelle plum, quince) and brioche.

Cuvée Vulcan Forged - Sleeve

C. Token Generator Company

The Token Generator Company is a unit/organization which develops tokens used within the Champ Association ecosystem and other blockchain platforms. Champ association enables external incubation projects/startups to leverage the Token Generator Company in the Champ ecosystem for the development of their own tokens. Rather than spend a lot of money on minting tokens individually, this generator company can provide the same service at a more affordable rate.

As a subsidiary of the Champ Association ecosystem, the Token Generator Company accepts fiat and cryptocurrencies to create and provide tokens for traditional customers, incubation projects, and every other entity that needs tokens within the Champ Association ecosystem.

D. Blockchain Gaming Studio

Over the years, gaming has poised itself as one of the fastest-growing entertainment sectors, unleashing limitless interactive earning models for gamers and non-gamers. The integration of blockchain technology in gaming enables players to have more control over their in-game assets, in-game rewards, and virtual earnings, which could be in the forms of cryptocurrencies or NFTs. Unlike traditional games, wherein gamers only gain a virtual reward with no utility, blockchain makes it possible for gamers to withdraw their rewards or earnings and convert them to valued currencies.

To ensure all digital assets collected by members playing games within the Champ Association meet all conditions above, the blockchain gaming studio was integrated while prioritizing the features required to enable clients, businesses, and individuals to easily access the growing decentralized gaming industry – this subsidiary boosts the release of dopamine by providing inclusive access to passive income streams managed through NFT ownership and \$VIGNE utilization within select metaverses of the association.

Cuvée Decentraland - Sleeve

Services Provided to Entities

Individual Members: These are users in the Champ Association ecosystem who leverage the gaming platform to earn and be entertained. They can either participate in the F2P games or the P2E games.

Business Client: Clients in the ecosystem are external project developers looking to leverage the talent in Champ Association to build a virtual gaming platform for their own native cryptocurrencies and/or NFTs. Clients will be required to pay fiat currency to receive this service from Champ Association or give donations of their crypto/NFT for staking protocols on the Champ Association DEX. Whether the games are built for use in the Champ Association or developed for external organizations, all games will be developed on blockchain technology.

Two types of play-to-earn blockchain games are integrated to give a full user experience:

Play-to-earn gaming enables gamers to battle other players, complete tasks/quests, and progress through economic structured RPG mechanisms within games of the studio to earn digital rewards that can be converted to real-world valued assets.

Free-to-Play (F2P): The F2P gaming mechanism enables gamers to play without having to pay upfront, meaning the ownership of specific cryptocurrency or NFTs is not required to play. Gamers who opt for this mechanism will also be able to earn from their wins.

Pay-to-Play (P2P): The P2P games require payment – gamers looking to participate in these games must pay the cryptocurrency entry fee and/or hold the NFTs required for admission within events or gaming sectors of each metaverse. Players that win P2P games will receive greater rewards than players that participate within F2P games.

Cuvée Lukso - Sleeve

Rewarding Mechanisms

To help sustain the F2P game economy, percentages of tokens lost from players during P2P games are accumulated and sent to the F2P reward pools to bolster rewarding metrics across the board. Just as in F2P, every P2P game has different reward and penalty ratios. However, before starting a challenge, players will be informed of the risks and rewards.

Rewards are given to players in either NFTs, \$VIGNE and/or other ecosystem tokens. Players who participate in the Free-to-Play games will be able to earn small amounts of \$VIGNE or ecosystem token rewards and common NFTs, while players who pay to participate in the Pay-to-Play games will get large amounts of token rewards and more exclusive NFTs. As a blockchain game, every player will have an integrative wallet on their gaming account to enable them to withdraw earnings at the end of a gaming cycle, which will also enable them to rent out unutilized NFT assets for others to leverage their gaming skills to share rewards with the owner of rented assets.

Vineyard Vocations (Flagship Game)

‘Have you ever desired to own a vineyard but don’t want to deal with the manual labor or hot sun? Purchase a plot of digital land and relax while you collect 10% of the profit made from all Crypto Champagne bottles sold.’

Vineyard Vocations is an open-world massive multiplayer online role-playing game that enables NFT landowners to earn passive revenue by employing NFT playable characters to cultivate vineyards, produce champagne, and manage metaverse bottle sales; landowners must utilize multiple NFT Types for establishing digital operations to earn \$VIGNE or \$BUBBLY tokens within the metaverse, and the efficiency of most NFT Types can be increased by soft-locking \$BUBBLY tokens within the NFT.

The \$VIGNE and \$BUBBLY tokens will be the primary currencies utilized in the metaverse; landowners and players will be paid in these tokens.

Cuvée Solana - Sleeve

In addition to the rewards that can be earned by playing within the metaverse, landowners will share 10% of the yearly profit derived from bottle sales that are linked to Crypto Champagne. At the end of each year, all landowners can submit one signature digital blend to be made at the Crypto Champagne production facility for a fee. It will take 2 years for each blend to stipend. The blend that is chosen as best will be added to the available blends sold by Crypto Champagne, and the creator of fermentation recipe will receive vintner royalties for each special-blend bottle sold.

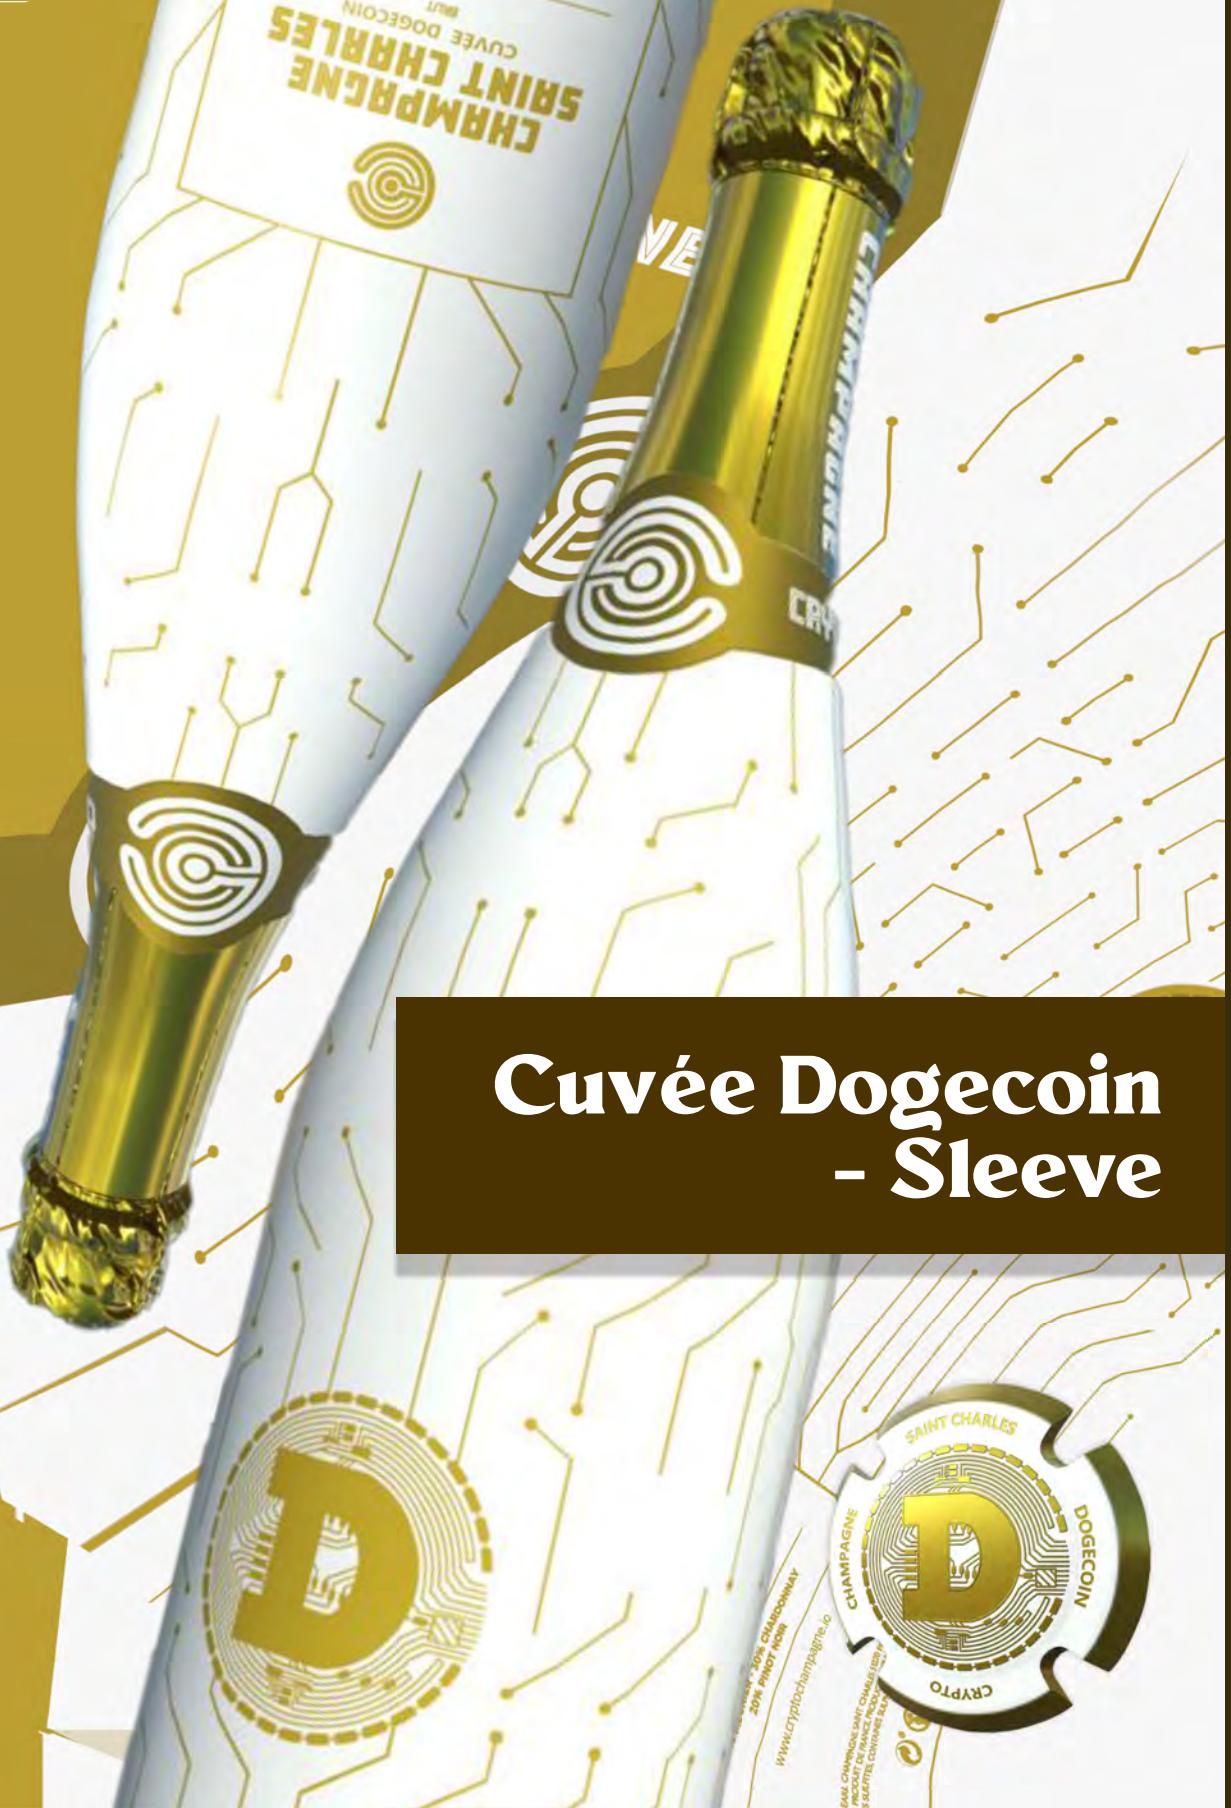

View the [Game Design Document](#) of Vineyard Vocations to better understand the interaction between \$VIGNE, \$BUBBLY, and NFTs of the metaverse.

Loopkit Mansions

‘Are you tired of sitting on the couch in Mom’s basement, waiting for your next big placement or hit-single?! Well, time to pull the wedgie out of the cheeks and put those fingers to work! Join our group of crypto degenerates. How? By making NFT Loopkits and managing Loopkit Mansions to become the greatest Crypto-DJ on the blockchain!’

This game will enable users to battle one another with the music tracks/beats they have created from sounds/loops within Loopkit NFTs. Players will be able to craft Loopkit NFTs of their own and sell them to one another, or they can purchase Loopkit NFTs offered by the Gaming Studio on the marketplace to increase their inventory for crafting beats that are utilized in battles.

Loopkit Mansion NFTs are nightclub landmarks owned by the Gaming Studio, strategically structured to reward the temporary manager with daily rewards; each mansion will be temporarily placed under the management of highest-ranking players on the leaderboard. The leaderboard will automatically update each day, and it will act as an ongoing pool that rewards the temporary managers depending on total activity within that Loopkit Mansion. P2P fees derived from features within the metaverse fill this reward pool.

Cuvée Dogecoin - Sleeve

KillStreak

‘The Champ Association Headquarters is being overrun with enemies! Defend the compound from being raided and be rewarded for your service.’

Each player must pay ‘x’ \$VIGNE to enter the first-person-shooter game. Upon entering the match, every player will be given ‘x’ lives, and once all lives have been used they will be unable to play until the next match. For every kill the player obtains, they will be rewarded with a percentage of the tokens paid by all players.

For instance: 100 players betting 100 \$VIGNE tokens each will produce a 10,000 token pool. Then, each player is given 5 lives (500 deaths total) to participate in the game. Each kill rewards the player with 20 tokens, but a player must have at least 5 kills to get their money back and 6 or more kills to be profitable.

BubbleStar Express

‘Attention, there are numerous all-exclusive events being held for connoisseurs! It is imperative that these crates make it to each mansion on time. The quickest character to get the cargo to our Champ Association mansions will receive a handsome reward along the way.’

There are various influencer NPCs living in the metaverse community with different mansions. Hence, ‘x’ players participate in a race to deliver champagne to these influencers’ mansions, including Elon Musk’s. To make the journey easily directional, all players have access to the maps of each influencer’s mansion, and the track difficulty depends on the delivery route chosen by players via in-game DAO/voting protocols.

However, every player must deposit ‘x’ \$VIGNE to enter the race. 90% of the \$VIGNE is placed on the map as token icons, 5.5% of the \$VIGNE is sent to the utility reward pool, 3% of the \$VIGNE is sent to the foundation wallet, and 1.5% is sent to the F2P gaming community reward wallet.

Cuvée Shiba Inu - Sleeve

There are ‘x’ racing lanes that have random obstacles, including token icons spawning every ‘x’ seconds. Recovered token icons enable the player to earn ‘x’ number of \$VIGNE. Hitting obstacles makes a player’s vehicle lose ‘x’ number of \$VIGNE, and all \$VIGNE lost from hitting obstacles goes to the F2P gaming community reward wallet. To dodge the obstacle, a player must either speed up or slow down to get ahead/behind an opponent in the adjacent lane.

BubbleStar Express is a competitive yet very interesting game. Players must showcase skills, resilience, and commitment to win and earn \$VIGNE tokens.

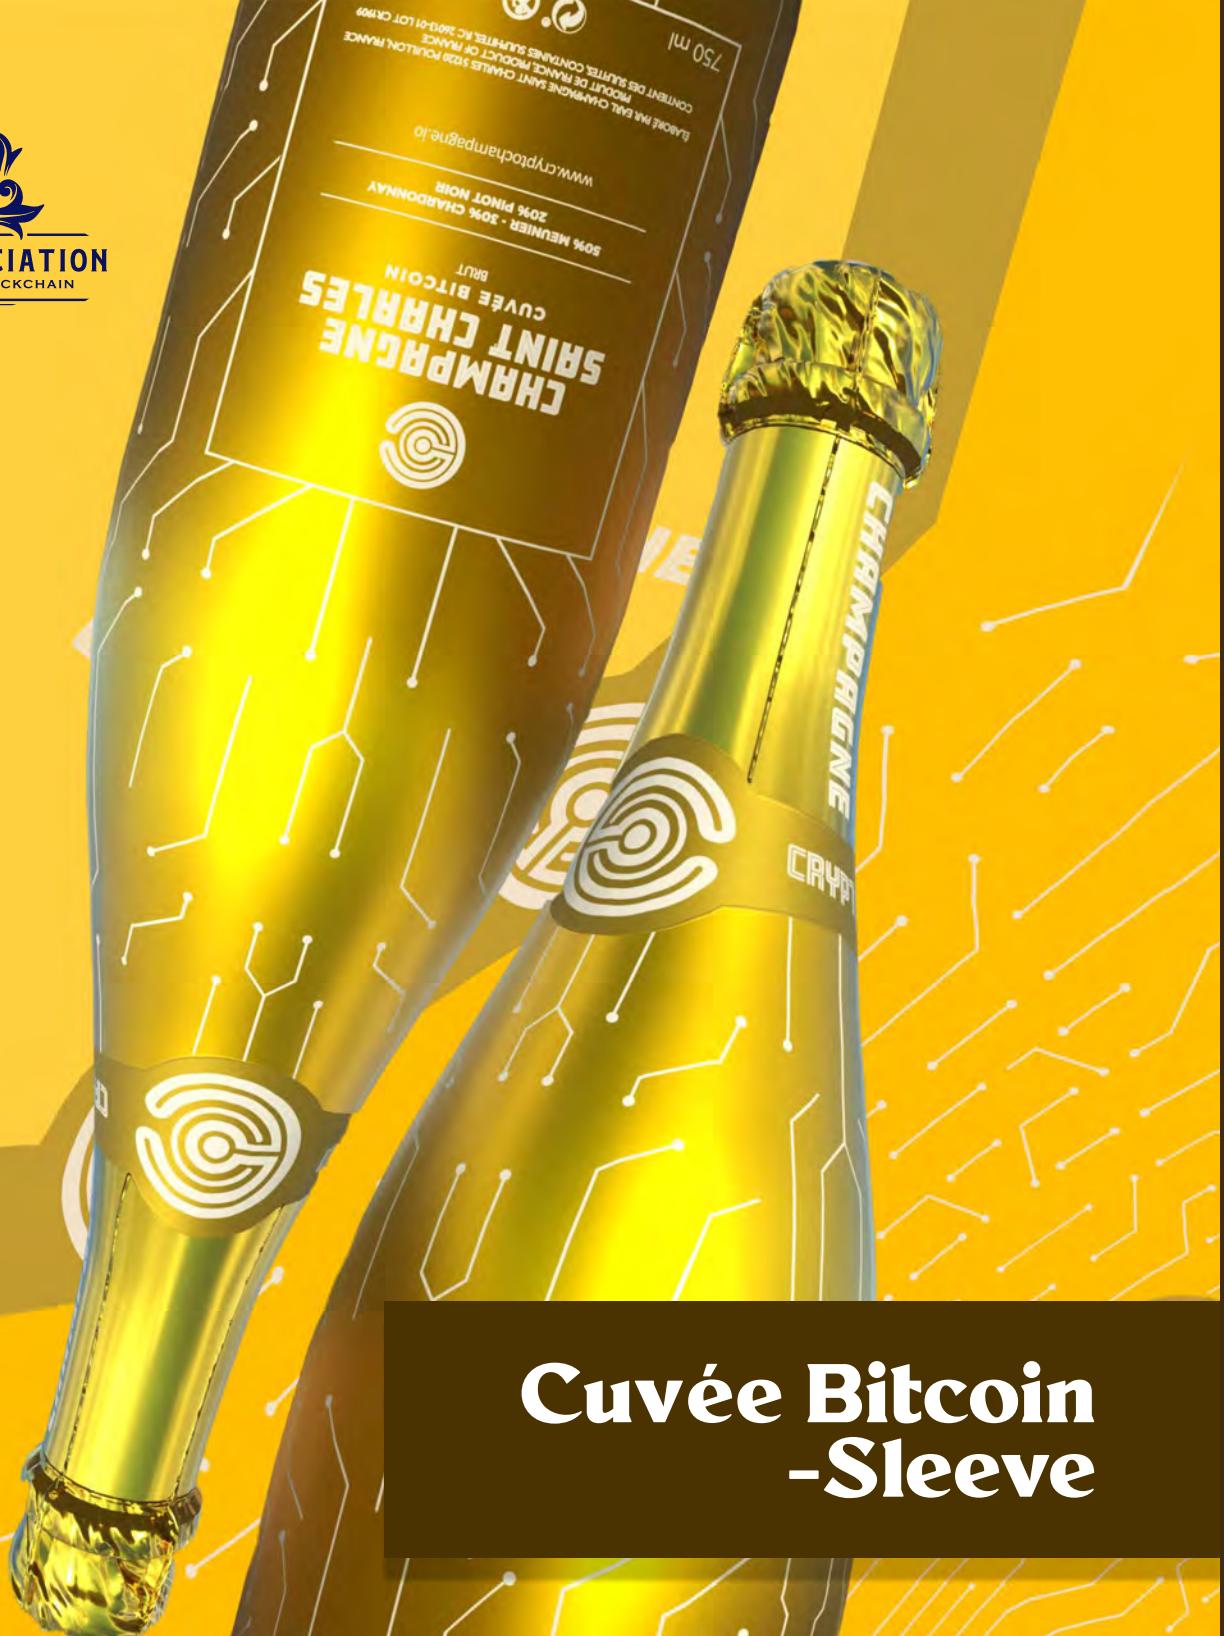

Tassels and Corks

‘As players bust moves with their voluptuous characters to seduce the crowd with sensational breasts/abdomens and bubbly champagne, much experience is gained. Experience points hone twerking skills and unlock additional dance moves as new levels are reached. Become the best stripper in the digital realm – shake what your momma gave you!’

RPG stripper game that requires the player to use a dynamic stripper skin NFT character, such as famous influencers within the cryptocurrency industry. These NFTs have an extremely low number of editions and are sold on the marketplace, but there is also a large supply of starter ‘striper skins’ that players can use at no cost.

The game will be played with arrow keys, and the mechanics are similar to the world-famous game ‘Dance Dance Revolution’. There will be PvP and PvC game modes; player-versus-player game modes will involve betting \$VIGNE on who can score higher, while player-versus-computer game modes will be specific tasks that unlock milestone NFTs.

Depending on set goals, gamers can either choose to play with other gamers to earn \$VIGNE or play with the computer to earn NFTs.

To Summarize the Blockchain Gaming Studio:

The gaming studio in the Champ Association is a core sub-entity that generates revenue flow into the ecosystem through the provision of gaming services to third-party blockchain projects, ultimately adding value to the \$VIGNE token by making it function as a utility token in the studio. All tokens entering reward pools will exponentially increase as the userbase of gamers playing within the ecosystem increases; greater token and NFT rewards can be earned by participants as the community grows. Gamers can stake their tokens to generate yields or exchange their tokens for fiat value, while NFT earners can place their NFTs on the NFT marketplace for sale and enter yield farming pools that provide greater rewarding rates. Additionally, we are structuring the NFT marketplace to enable Champ Association members holding nodes to earn royalties on each NFT sale in the network.

E. Membership And Club Design

The Champ Association membership club is another sub-entity in the Champ Association that contributes to the growth of the ecosystem and drives value to the underlying \$VIGNE tokens. The membership club will primarily focus on accepting fiat or cryptocurrency from the Champ Association to host entertainment events and excursion packages that share admission fees with correlated working entities. Beyond the online experience of being a part of an innovation-oriented blockchain community, the membership club provides a more inclusive experience for members through phygital events and activities. New entrants will have opportunities to meet enthusiasts and experts, thus improving their network and gaining a good wealth of knowledge.

The Champ Association integrates a five-tier multi-faucet node system with dual asset soft-locking value mechanisms to aid the economic stability of \$VIGNE and \$PYR. Each multi-faucet utility node will reward multiple digital assets and perks, but the node-tier held by members will determine the perks and utility rewards deserved within the organization. Those who aim to become node holders must have a specific value of \$VIGNE tokens soft-locked with a specific value of \$VIGNE-\$PYR liquidity pool tokens. Once a member's wallet meets the minimum soft-locked value requirements, they can start the maturation of a Pragmatist node-tier, and after 15-days the wallet address will be eligible to equally share 1% of the quarterly utility rewards reserved for all other Pragmatist node holders. Hence, if a member has the ranking of Visionary within the multi-faucet node-tier system, they will obtain an equal share of the quarterly utility rewards that are set aside for all Visionary node holders.

Membership Levels

Visionary is the highest node tier, and it will be attainable by specific private investors that meet the soft-lock requirements.

Total soft-locked value required for both tokens to obtain a specific membership rank has been decided and is subject to change if the foundation or ecosystem deems necessary; all changes will be proposed by the foundation to the community via DAO protocols, so that voting rights are distributed in a decentralized manner based upon membership status and the value of their total holdings.

All multi-faucet node utility rewards will be sent to the designated Holding Wallet for safekeeping until after the third bottle sale threshold has sold-out. This gives adequate time for all community members to purchase enough Rare or Exotic Luxury Crypto Champagne bottles to collect the number of \$VIGNE tokens required for node establishment and maturation.

View the table below to see membership benefits and the quarterly percentage of utility rewards that will be shared between members within the same node-tier:

Multi-Faucet Node Reward Tiers	Soft-Locked \$VIGNE Value	Soft-Locked \$VIGNE-\$PYR Value	Required Maturation Period	Share of Utility Rewards	Membership Perks and Benefits at Events	Ongoing Sleeve Bottle Discount	Nodes Allowed at Start
PRAGMATIST	€100	€100	15 Days	1% of Reward Pool	5% Vendor Discount at Events and an Exclusive Phygital Memorabilia with NFT	3% Discount	3,636 Nodes
REALIST	€5,000	€5,000	30 Days	5% of Reward Pool	15% Vendor Discount at Events and an Exclusive Phygital Memorabilia with NFT	10% Discount	363 Nodes
IDEALIST	€25,000	€25,000	60 Days	12% of Reward Pool	30% Vendor Discount at Events and an Exclusive Phygital Memorabilia with NFT	25% Discount	174 Nodes
PHILOSOPHER	€125,000	€125,000	120 Days	37% of Reward Pool	35% Vendor Discount at Events and an Exclusive Phygital Memorabilia with NFT	30% Discount	107 Nodes
VISIONARY	€625,000	€625,000	240 Days	45% of Reward Pool	40% Vendor Discount at Events and an Exclusive Phygital Memorabilia with NFT	35% Discount	26 Nodes

It is wise to hold more LP tokens than required to prevent node termination status, especially since the value of an LP token depends on both assets backing the liquidity pool.

Cuvée XRP - Sleeve

Node Quantity Limitations

To ensure that no more than 30% of the total \$VIGNE token supply is being soft-locked within nodes for a well dispersed economy, the following parameters have been set according to the ICO price (€0.0054545).

Total Liquidity that can be Soft-Locked:

$$(33,333,333,333) \times (0.30) \times (\text{€}0.0054545) = \text{€}54,545,000$$

Maximum Nodes Allowed per Tier during Bottle Threshold Sale 1:

View the chart below to see how all node-tier parameters were determined.

Multi-Faucet Node Reward Tiers	Liquidity Allowed to Soft-Lock per Tier	Nodes Allowed per Tier at Start	Total Liquidity Soft-Locked
PRAGMATIST (1% Share of Pool)	€54,545,000 x 0.01 = €545,450	(€545,450) / (€150) = 3,636 Nodes	€545,450 / €0.0054545 = 100,000,000 \$VIGNE
REALIST (5% Share of Pool)	€54,545,000 x 0.05 = €2,727,250	(€2,727,250) / (€7,500) = 363 Nodes	€2,727,250 / €0.0054545 = 500,000,000 \$VIGNE
IDEALIST (12% Share of Pool)	€54,545,000 x 0.12 = €6,545,400	(€6,545,400) / (€37,500) = 174 Nodes	€6,545,400 / €0.0054545 = 1,200,000,000 \$VIGNE
PHILOSOPHER (37% Share of Pool)	€54,545,000 x 0.37 = €20,181,650	(€20,181,650) / (€187,500) = 107 Nodes	€20,181,650 / €0.0054545 = 3,700,000,000 \$VIGNE
VISIONARY (45% Share of Pool)	€54,545,000 x 0.45 = €24,545,250	(€24,545,250) / (€937,500) = 26 Nodes	€24,545,250 / €0.0054545 = 4,500,000,000 \$VIGNE

Maximum Nodes Allowed during Future Bottle Threshold Sales:

The number of nodes allowed will increase by a multiple of 1.9, because it is the same ratio affecting token distribution and price appreciation associated with bottle sale thresholds, to ensure that the node community can grow at the same rate as our brand community when the number of brands within the network are doubled – view the chart below to see how all node-tier parameters were determined.

View the chart on page 43 to see how node availability per tier increases as new bottle threshold sales complete.

Projected Rewards per Bottle Sale Threshold

All bottle threshold sales require 20% of each brand's total bottle supply with \$VIGNE token rewards to be included in Exotic Luxury Bundles, while the remaining supply that includes \$VIGNE token rewards is sold as Rare Luxury bottles. Each threshold sale will provide more rewards than what is projected below, because the amount of Sleeve and Common Luxury bottles to be sold is unknown due to those two bottle-types having an unlimited bottle supply per threshold. Additionally, the crypto utility rewards distributed per bottle threshold sale will be diversified based upon the supported brands. This is because the Euros that are set aside as utility rewards for each Crypto Champagne bottle-type sale is utilized to market-buy the digital currency displayed on the branded bottle to be redistributed to the multi-faucet utility reward pool.

View the chart on page 45 to see the minimum reward each multi-faucet utility node holder will receive, if the maximum amount of nodes are established per tier, during the distribution of utility rewards accumulated from bottle threshold sales:

Cuvée Vechain - Sleeve

CHAMP ASSOCIATION
ENRICHMENT BY BLOCKCHAIN

Cuvée Polygon - Sleeve

Designated Benefits for Members

- Discounts for future products and merchandise on our webstores.
- Ambassador members receive monthly airdrops containing \$VIGNE tokens.
- Accumulation of variable rewards from utility protocols within the ecosystem.
- Sustainable passive income flow through increased sales of champagne bottles.
- Whitelist qualifications to projects created and/or incubated in the association.
- Admission to all crypto chateau locations, physical amenities, and online platforms designated for Champ Association members only.
- Admission to exclusive online and off-site entertainment events hosted for the public – separate from events associated with crypto chateau locations that are open to members only.
- Right to nominate sub-clubs that require LP tokens to be locked within farming pools for obtaining \$VIGNE; the foundation will match the \$VIGNE liquidity required to provide a 1-month \$VIGNE farming pool for chosen sub-clubs.
- Membership-weighted voting rights for public Champ Association DAO events, and exclusive voting rounds for instating the following criteria: which cryptocurrencies are added as brands for new bottle threshold sales; where to build new crypto chateau locations; which performers and vendors will be contracted to be present at entertainment events; where boosts are injected within farming and staking pools on the DEX; which community projects are incubated by the Champ Association; which P2E mechanisms to inject within community games of the ecosystem; which exchange to inject liquidity from the wallet reserved for liquidity provisions; and which charities receive aid from the Champ Association.

In the club, the \$VIGNE tokens must be utilized to pay for consumptions and/or register for an exclusive event/amenity.

CHAMP ASSOCIATION
ENRICHMENT BY BLOCKCHAIN

Cuvée Safe Haven - Sleeve

Utility Reward and Burning Protocols

The Champ Association integrates a 3.3% reflection mechanism where the \$VIGNE tokens function as a passive income generator for all wallet holders, which is triggered by token swaps via DEX – regular transfers will have no tax, only when a wallet is buying/selling.

Hence, a static reward system is integrated wherein 3% of the reflection fees generated from buys/sells are shared by wallet holders based upon total \$VIGNE balance (1.5% in \$PYR and 1.5% in \$VIGNE). The remaining 0.3% reflection mechanism is utilized for a buy-back-burn protocol, and \$VIGNE will be the asset bought to burn per transaction.

The reflection protocols provide increased holdings for all community members while also increasing the value of total token supply by establishing a natural deflationary mechanism.

Example of Money Flow within Reflection Protocols

- User swaps \$100 \$PYR for \$VIGNE.
- User receives \$96.7 of \$VIGNE in their private wallet.
- \$1.50 of \$VIGNE and \$1.50 of \$PYR is reflected to holders.
- \$0.30 of \$PYR is reflected to the \$VIGNE buy-back-burn wallet.

Utility rewards are derived from sectors of the Champ Association to be shared between node holders; the amount of utility rewards received by a node holder is dependent to the total amount of qualified nodes within the held tier.

Crypto Champagne Bottle Sales: 10% of profits from bottle sales will be sent to the node utility reward pool; profit accumulated from each brand will be airdropped to the reward pool in the form of currency displayed on bottle.

Brand Placements: When projects are not voted into the next bottle threshold sale, the CEO/Founder of the organization can reach out to the Champ Association for their brand to be placed within our available sleeve bottle product line; a portion of all bottle placement fees will be sent to the node utility reward pool. Brands can only be placed within the luxury product line when the DAO or foundation allows via bottle threshold voting mechanisms.

Games within the Studio: A portion of the utility rewards gained from pay-to-play games will be sent to the node utility reward pool. Essentially, the foundation shares a portion of the revenue obtained from gaming protocols established within the studio. As new projects are onboarded within the game studio, new games will become available and generate utility rewards for all node holders.

Multi-faucet Foundation Rewards: The crypto treasury company of the Champ Association will purchase nodes from various blockchain ecosystems with strategic revenue streams of the organization; 20% of the blockchain ecosystem node rewards will be shared by nodes of the Champ Association while the other 80% will be reinvested into attaining more nodes, thus enabling the multi-faucet dividend rewards to compound over time.

Incubation and Design Contracts: Projects incubated within the Champ Association ecosystem will be required to pay a lump sum in fiat, and if fiat is not applicable then the portion must be paid in equal value of the project's native token. The money accumulated via lump sum fee will be utilized to market-buy their token, or received tokens will be utilized if the project did not pay with fiat, and distribute a small percentage of the acquired token supply to the node utility reward pool for nodes to share while the other percentage of requested allocation is paid to the foundation.

DAO System

Decentralized Autonomous Organizations are setup for enabling foundations to propose agendas and amendments of the ecosystem to the community via voting rounds. As the Champ Association evolves with new DeFi applications and utilities, there may come times where the foundation deems fit to propose an amendment for previous instated bylaws and protocols. When or if this time comes, the Champ Association members will review the proposals submitted by the foundation and utilize their private wallets to vote in a membership-weighted manner.

When a proposed agenda or amendment is injected within the DAO, only club members are eligible to vote. Voting power of members is determined by a governance methodology that contracts the weight of votes to be distributed based upon total amount of tokens held on their connected wallet. The Champ Association was organized with this structure because the founders believe the opinion of those who hold the native asset of the ecosystem are most important.

The founders of the organization retain the right to bypass voting rounds and approve protocols, but executive orders will only take place when excruciating circumstances hold true.

8. TOKENOMICS

The \$VIGNE token is built on the ELS-20 token standard (the standard used for issuing smart contracts on the Elysium blockchain), thus making it cost-effective for developers, easily applicable for users, and secure with web3 smart contracts. As a utility token, it functions as the underlying token of the Champ Association, allows seamless transactions in the ecosystem, and is required to make payments for accessing exclusive decentralized services.

The circulating supply of \$VIGNE tokens is contingent to the demand driven by each subsidiary within the Champ Association ecosystem. In essence, supply associated with bottles will unlock as bottles are purchased, supply associated with farming, staking, and play-to-earn mechanisms will unlock as members complete the requirements necessary, supply reserved for liquidity to exchanges will unlock when the DAO or foundation gives permission, and supply reserved for onboarding partners to apply \$VIGNE rewards within their ecosystem will unlock as partnerships are established.

A. Token Details

Token Name: Crypto Champagne

Chain Network: Elysium (ESL-20)

Symbol: \$VIGNE

Decimal: 18

Max Supply: 33,333,333,333.00 (33.3 billion)

Available Circulation at Start: 782,173,311.13 Tokens (782.2 million)

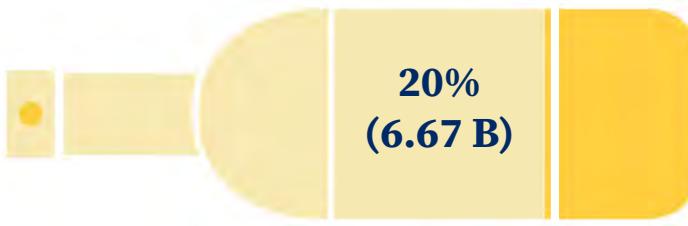

B. Token Distribution

Private Sale and Bottle Tokenomics

The sales of bottles contribute to the growth of \$VIGNE.

As new bottle threshold sales unlock, the rarity of \$VIGNE tokens increase because the total amount of \$VIGNE tokens to be acquired from purchased bottles will decrease as the number of bottles available for sale increase.

How is value established through bottle sales?

Crypto Champagne establishes a base fiat valuation for \$VIGNE tokens acquired during bottle threshold sales by linking a token distribution rate to a fixed value of €200 per Rare or Exotic Luxury Bottle sold. While establishing value for the \$VIGNE token by rewarding the purchaser with the number of tokens that equate to €200 during that threshold, further value is provided to the customer by rewarding €50 of the cryptocurrency displayed on the bottle. Hence, if our €600 Rare Luxury Bitcoin Bottle is bought, then €200 of \$VIGNE and €50 of \$BTC is airdropped to the wallet address of the purchaser. This system of distribution does not change as new bottle threshold sales take place.

When all bottles are sold for a particular threshold, the Champ Association will take a slight intermission to allow members to vote via the DAO about which new brands should enter the ecosystem for the next bottle threshold sale. Threshold parameters of available bottle supply will increase by a multiple of 1.9 to enable the offered brands within Champ Association's network to double, ultimately making more bottles available each time new communities are welcomed into the organization. However, for every three luxury bottle threshold sales, the amount of \$VIGNE tokens allocated to these thresholds will decrease by 100 million tokens (0.3% of the total supply).

The first bottle threshold sale will provide a bonus of 33.3% \$VIGNE tokens for those that purchase an Exotic Luxury NFT Bundle, while all following thresholds abide by the Champ Association's bottle threshold parameters defined in this article. For each luxury bottle sold during the first bottle threshold sale, at least 36,666 \$VIGNE tokens will be given for €200, thus equating the ICO price to €0.0054545 ($\text{€}200 / 36,666 = \text{€}0.0054545$).

After the third allocation of 433.3 million \$VIGNE has sold out, the foundation will meet with node holders to determine the allocation for the next three thresholds, which will be the protocol followed for all subsequent threshold sales. It's also important to note that the token supply will always be attached to bottles, with the supply of the bottle tokenomics wallet replenished through static reflection protocols and strategic buybacks. One threshold sale is expected to take place per quarter, but as mass adoption increases the rate of threshold advancement is likely to increase as well, provided it is sustainable with the demand of operations.

Purchasers of bottles receiving \$VIGNE tokens will be able to provide liquidity or enter yield farming pools, after the team creates a liquidity pool or yield farms on the Champ Association's upcoming DEX. Additionally, individuals can also soft-lock the required value of \$VIGNE tokens with \$VIGNE-PYR LP tokens to become a club member. The Champ Association offers many perks attractive to those seeking additional passive rewards associated with multi-faucet utility nodes, exclusive farming and staking pools, blockchain gaming entities that provide numerous different types of utility token rewards from projects incubated by the gaming studio, and other rewards derived from upcoming subsidiaries.

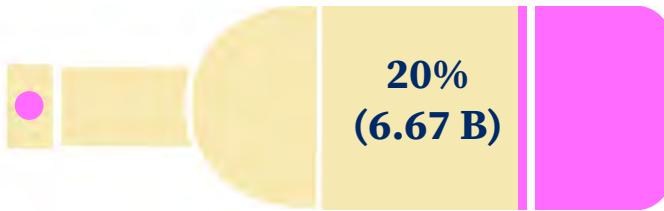

Parameters Establishing Value of \$VIGNE via Bottle Sales

Threshold Parameter Supply per brand increases by 90%, to reduce available bottles per brand by 5%, as brands per threshold double.	\$VIGNE Airdropped per Bottle (y) Formula: [Allocation/Parameter = y]	\$VIGNE OTC Value (X) Formula: [\$200/y = x]	\$VIGNE Allocation per Threshold
20,000 Bottles [16 brands; 1,250 ea]	2.2% Supply / 20,000 = 36,666.65 \$VIGNE	€200 / 36,666.65 = €0.0054545	733.3 Million (2.2% of Total Supply)
38,000 Bottles [32 brands; 1,187 ea]	2.2% Supply / 38,000 = 19,298.24 \$VIGNE	€200 / 19,298.24 = €0.010364	733.3 Million (2.2% of Total Supply)
72,200 Bottles [64 brands; 1,128 ea]	2.2% Supply / 72,200 = 10,156.97 \$VIGNE	€200 / 10,156.97 = €0.01969	733.3 Million (2.2% of Total Supply)
137,180 Bottles [128 brands; 1,071 ea]	1.9% Supply / 137,180 = 4,616.80 \$VIGNE	€200 / 4,616.80 = €0.04332	633.3 Million (1.9% of Total Supply)
260,642 Bottles [256 brands; 1,018 ea]	1.9% Supply / 260,642 = 2,429.89 \$VIGNE	€200 / 2,429.89 = €0.08231	633.3 Million (1.9% of Total Supply)
495,219 Bottles [512 brands; 967 ea]	1.9% Supply / 495,219 = 1,278.89 \$VIGNE	€200 / 1,278.89 = €0.15639	633.3 Million (1.9% of Total Supply)
940,917 Bottles [1,024 brands; 918 ea]	1.6% Supply / 940,916 = 566.82 \$VIGNE	€200 / 566.82 = €0.3529	533.3 Million (1.6% of Total Supply)
1,787,743 Bottles [2,048 brands; 872 ea]	1.6% Supply / 1,787,740 = 298.32 \$VIGNE	€200 / 298.32 = €0.6704	533.3 Million (1.6% of Total Supply)
3,396,711 Bottles [4,096 brands; 829 ea]	1.6% Supply / 3,396,711 = 157.01 \$VIGNE	€200 / 157.01 = €1.2738	533.3 Million (1.6% of Total Supply)
6,453,752 Bottles [8,192 brands; 787 ea]	1.3% Supply / 6,453,752 = 67.14 \$VIGNE	€200 / 67.14 = €2.979	433.3 Million (1.3% of Total Supply)
12,262,129 Bottles [16,384 brands; 748 ea]	1.3% Supply / 12,262,129 = 35.33 \$VIGNE	€200 / 35.33 = €5.66	433.3 Million (1.3% of Total Supply)
23,289,045 Bottles [8,192 brands; 787 ea]	1.3% Supply / 23,289,045 = 18.60 \$VIGNE	€200 / 18.60 = €10.75	433.3 Million (1.3% of Total Supply)

+20% of the total \$VIGNE supply will have been put in circulation at this point. However, the wallet will constantly replenish itself as people buy and sell \$VIGNE on the open market, which is further replenished with strategic \$VIGNE buy-backs from the foundation to ensure available supply; ultimately, there will be a substantial amount of funds remaining on the wallet to continue these token distribution protocols. From this point onward, the foundation will submit proposals to the DAO, and nodes will select from the available options that determine the total number of \$VIGNE tokens to be allocated for the next three thresholds – this protocol will be followed moving forward.

***48,839,997.80 \$VIGNE added to 1st threshold for 33.3% bonus to 500 Exotic Luxury Bundle orders during phase 1.**

Blockchain Gamification Ecosystem

Play to Earn Pool - 14%

The flagship game, Vineyard Vocations, obtains the majority of the token distribution from the 'Play to Earn Pool' sector to initiate the sustainable rewarding mechanisms within the ecosystem – a total of 10% will be injected within the Vineyard Vocation play-to-earn economy.

Portions of the remaining funds will be allocated to gaming projects being incubated within our game studio, on a case-by-case basis at the Foundation's discretion, so that both \$VIGNE and the porting project's native token can be rewarded to players via play-to-earn mechanisms. Each game entering the Champ Association will be required to incorporate a F2P method that rewards players with tokens to ensure that gamers will be rewarded for their accomplishments. As projects are onboarded within the Champ Association, total number of tokens allocated to future projects will decrease to sustain the porting of more games and increase the rarity of the token itself.

Community Creation - 3%

Portions of these funds are allocated as a Kickstarter to supplement development costs for selected gaming projects designed by members of the Champ Association. The allocation of funds, and which gaming project receives said funds, will be decided upon by a DAO voting system.

Utility Reward Pools - 2%

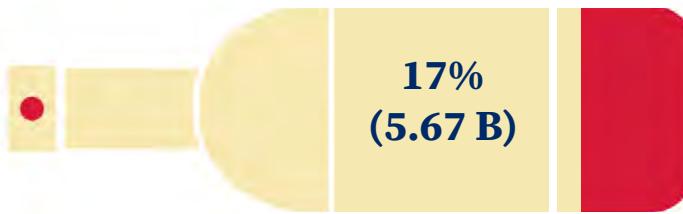

Some games have utility reward pools that reward the owner, and/or temporary managers of NFTs, with passive rewards siphoned from the transference of wealth within qualifying infrastructures. The funds held in reserve for this sector are for boosting utility reward protocols within certain games of the studio.

Lottery Wallet - 1%

The Champ Lotto Wallet utilizes a complex algorithm to randomly select 50 \$VIGNE addresses that share 0.01% of the lottery wallet balance each month; [(Lottery Wallet Balance) x (0.0001) / 50 = y].

Reserved for Liquidity to Exchanges

The foundation provides liquidity to the community in a decentralized manner via Champ Association's audited and vetted DEX to avoid manipulations commonly occurring within centralized exchanges. Members can also provide liquidity and share a portion of the trading fees accumulated from supporting pools; navigate to the DEX. DAO.

Initial DEX Offering (IDO) - 3%

After the first bottle threshold sale is sold-out, 3% of the total \$VIGNE token supply will be placed inside liquidity pools with €5,454,545 worth of liquidity across multiple pairings (\$VIGNE/\$PYR; \$VIGNE/\$LAVA; \$VIGNE/\$EUROC; \$VIGNE/\$USDC; and others) – deciding if/when to move liquidity to another DEX will occur through the DAO.

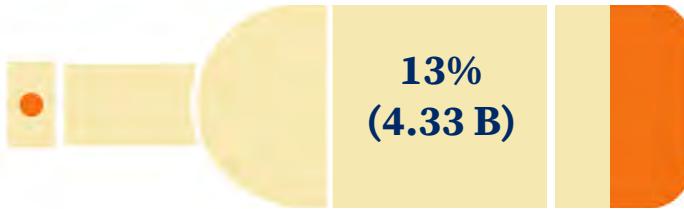

Liquidity Chosen by the DAO Infrastructure – 5%

Once per quarter, ambassadors of the Champ Association will utilize a DAO to vote upon where 3% of the DAO liquidity wallet's funds will be sent to provide liquidity at foundation approved exchanges.

Liquidity at Foundation's Discretion – 9%

These funds will be utilized to list on exchanges at the foundation's discretion.

Champ Association DEX Pools

\$VIGNE Staking Pools – 2%

Users can stake \$VIGNE to earn a variable percentage of \$VIGNE or other Champ Association tokens.

\$VIGNE and NFT Staking Pools – 2.75%

Special edition staking pools will be developed to enable users to soft-lock \$VIGNE to earn a variable APR% and unlock a limited NFT, while some other created pools will require a user to also own a specific NFT to be eligible for establishing positions.

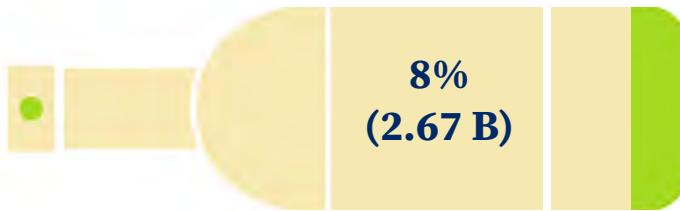

LP Farming Pools – 3.25%

Users can stake LP tokens to earn a variable APR% of \$VIGNE or other Champ Association tokens.

LP and NFT Farming Pools – 5%

Special edition farming pools will be developed to enable a user to soft-lock LP tokens to earn a variable APR% and unlock a limited NFT, while some other created pools will require a user to also own a specific NFT to be eligible for establishing positions.

Founders, Partners, and Advisors

Founders and Core Team – 5%

Employees and team members of the Champ Association are not paid in \$VIGNE tokens. The foundation locks all \$VIGNE team tokens within the ongoing \$VIGNE staking pools and withdraws the value required to pay salaries at the end of each month. After tokens are withdrawn from the staking pool, \$VIGNE is then bought by the holding company and fiat is distributed to all employees. This allows the team wallet to compound over time and reduce the likelihood of large dumps on the public market because the association is essentially buying the token in a private and legal transaction.

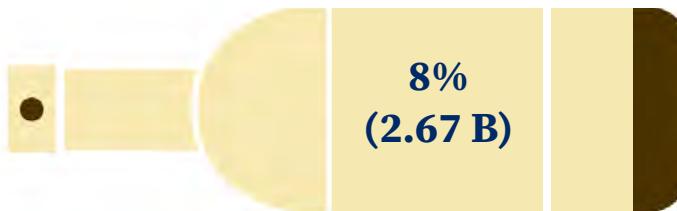

Partners – 2%

Each time a partnership is made, 3% of the partnership wallet balance will be allocated to establish campaigns with onboarding partners. Allocating such a reasonable percentage will enable the wallet to slowly regenerate through means of static reflection, which means that many partnerships can be established with rewarding campaigns for the community.

Advisors – 1%

Advisors receive a set number of tokens based upon the roles they enforce, and networks delivered, which will be no greater than 1% of the remaining advisory wallet balance. Advisory allocations will be disbursed over a long period of time, and reappointment will be made if advisement is still needed at the end of the initial term.

Private Investment Firms and Venture Capitalist

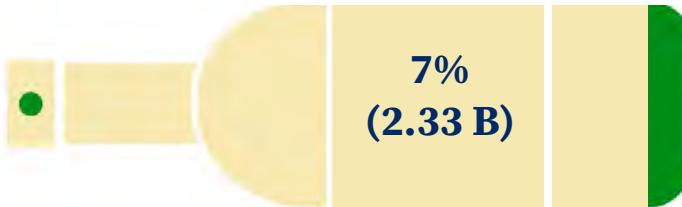

Private Sale – 8%

Investment firms will have the option to purchase 0.5% of the available 8% private sale token supply at €909,091 per unit during the first threshold bottle sale (the cost of a unit must match the OTC value of all tokens being purchased). All private sale tokens will be locked within staking pools for a minimum of 24 months, but earnings can be removed without penalty when desired. Unsold units will go towards the ‘Private Sale and Bottle Tokenomics’ sector to ensure market dilution is minimal.

No private investor can obtain more than one unit to ensure a diverse and well-established network is in place, and the private investor must be an accredited one with vast connections that will enable tremendous growth for the community.

Marketing, Club Members, and DAO

Marketing – 4.5%

Funds will be utilized for advertisements on well-known crypto platforms, press releases, AMAs, interviews, trading campaigns on exchanges, social media events, guerrilla marketing in highly populated areas, and other marketing strategies.

Club Member Airdrops – 1.5%

Monthly Airdrop Formula

(Total Tokens in Wallet) x (0.001) = Total Tokens to be Shared by Ambassador Members of each Rank.

Monthly scheduled airdrops equating to 0.1% of the club member airdrop wallet balance will be distributed to Ambassador Members. Each member must equally share the deserved amount with other ranked Ambassador Members. For example, if there are 500 Visionary Ambassadors and 500k tokens to share for that ranking, then each Ambassador will receive 1k tokens.

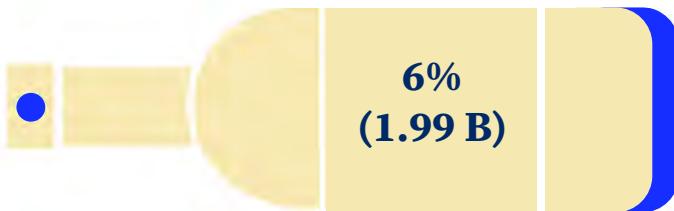

Ambassador DAO: Charity, Staking, and Burn – 1%

Monthly Injection Formula

(Total Tokens in Wallet) x (0.0007) = Total Tokens to be Allocated.

The DAO will control which staking pools receive a boost in APR% for the month, along with deciding how much of that boost will be utilized for donating to charity organizations or the burn wallet address. Every month, Ambassador Members will be required to cast their votes to decide how many tokens are allocated to staking reward pools, charities, and/or the burn address. Each vote counts as a percentage of the tokens being allocated for that month. For example, if a Visionary gets 10 votes, and each vote counts as 1,000 \$VIGNE, then the Ambassador could span the votes across multiple sectors.

Reserved for Developments and Facilities

Developers, Smart Contracts, and Audits – 3%

These funds will be held in reserve for future web3 developments.

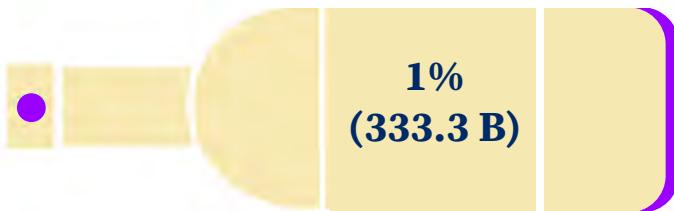

Club Creation and Expansion – 2%

When the Champ Association is ready to build a new crypto chateau, the Ambassador DAO will decide upon location and design, which will be sent to the foundation and board of advisors for review.

Club and Lodging Maintenance – 1%

This allocation will be reserved for paying employees and services utilized to maintain the facilities. Addition of new amenities will be included in this budget, which will be voted upon by Ambassadors and reviewed by the foundation and board of advisors.

Deflationary Mechanism (Burn at Launch)

1% of the total supply will be burnt (sent to a wallet with renounced ownership) to establish a natural deflationary mechanism for all transactions, sustained by the 3.3% static reflection protocol within the token contract of \$VIGNE. The reflection is rewarded to \$VIGNE holders in \$VIGNE and \$PYR at equal amounts, which means that \$VIGNE and \$PYR are burnt as transactions occur and as funds enter the burn wallet.

All sector wallet addresses are listed on the Champ Association website, so members of the community can search the blockchain to verify the proper use of funds. Having funds on a separate KYC wallet enables easy management of the continually growing saved funds through static reflection protocols of holding.

C. Key Features

- Signing of collaboration and agreement documents with champagne producers. Through the collaborations, all necessary knowledge and tools will be at our disposal, including the administration, certificates/licenses, and stratified shipping system that has a global reach.
- Integration of exclusive crypto clubs that consist of physical and online platforms which utilize blockchain technology to authorize access to certain amenities and features within the Champ Association.
- Inclusion of a Tokenomics structure that is engineered to induce token appreciation as product volume and community population increase through utilization.
- Provision of special access for members of the Champ Association to certain areas of revolutionary blockchain games being developed by our gaming studio.
- Development of unique and dynamic NFTs that will have valuable usecases throughout the Champ Association ecosystem.
- Limited farming and staking pools that provide APR% and NFT rewards.
- The ecosystem is full of complex and time-consuming earning models that provide substantial rewards, but users can also obtain passive rewards just by holding for the 3% static reflection rewards.
- Great marketing campaigns, sponsored by professional marketing firms that are selected by Ambassador Members through DAO voting mechanisms.
- A fantastic founding duo who works together like a well-oiled machine and will appoint qualified advisors where necessary; no cog will be left unturned!

9. AFFILIATE PROGRAM

Are you passionate about blockchain technology and looking for an opportunity to earn substantial rewards while educating your community about the industry?

Look no further than the Crypto Champagne affiliate program, managed by the Champ Association. As an affiliate, you'll have the chance to earn reoccurring commissions by promoting Crypto Champagne subscriptions to your local community, while also playing a vital role in educating others about the benefits of blockchain technology. Join us in revolutionizing the industry and spreading the word about Crypto Champagne – the world's first blockchain-based champagne – today.

A. Utility Rewards per Bottle Sale or Subscription

Each bottle-type sold via referral link will delegate fiat/\$EUROC to the affiliate's registered digital wallet:

Product-type	Utility Rewards to Distribution Wallet
Sleeve Bottles	€1.50
Common Luxury Bottles	€2.50
Rare Luxury Bottles	€4.50
Exotic Luxury Bottles	€7.50
Exotic Luxury Bundles	€60.00

Subscriptions will act the same as above, meaning if an affiliate code is linked to an account subscribed to a Common Starter Quarterly Subscription, then the affiliate will receive €20 because 8 Common Luxury Bottles will have been sold.

B. Affiliate Tiers

As affiliates refer consumers to purchase individual bottles, or subscribe to quarterly shipments of Crypto Champagne, the total required value associated with referrals will increase and unlock bonus rewards for the affiliate's account each quarter. If a referred account increases their quarterly subscription value by opting into more than one subscription, the value associated with that account will increase and be reflected on the affiliate's monitoring dashboard.

Affiliate Ranking/Tier	Required Referrals	Quarterly Bonus Rewards
Bronze	€10k / year	1 Sleeve Bottle
Copper	€25k / year	2 Sleeve Bottles
Silver	€45k / year	3 Sleeve Bottles
Platinum	€70k / year	3 Sleeve Bottles and 1 Common Bottle
Gold	€100k / year	4 Sleeve Bottles and 1 Common Bottle
Diamond	€135k / year	4 Sleeve Bottles and 2 Common Bottles
Sapphire	€175k / year	4 Sleeve Bottles, 2 Common Bottles, and 1 Rare Bottle
Emerald	€220k / year	5 Sleeve Bottles, 3 Common Bottles, and 1 Rare Bottle
Ruby	€270k / year	5 Sleeve Bottles, 3 Common Bottles, 2 Rare Bottles, and 1 Heirloom Set (Glasses and Cork Stopper)

10. QUARTERLY SUBSCRIPTIONS

Non-crypto and common crypto subscriptions will be open indefinitely, ultimately because there is no limitation to the quantity of these bottle-types allowed per brand when new bottle threshold sales debut. Hence, this subscription feature will be primarily utilized to enable members of the Champ Association to reserve rare and exotic luxury bottles of Crypto Champagne for upcoming bottle threshold sales. Multi-faucet utility node holders within the association will be able to register for rare or exotic subscriptions in the first month of each quarter, while all non-node holders must wait and hope supply remains when the public subscription rounds open. The subscription round identified above is an estimation in which the foundation foresees Quarterly Subscriptions to go live, but is subject to change.

A. Non-Crypto Subscriptions

Subscription Tier	Cost per Quarter	Quarterly Rewards
Starter	€512	8 Sleeve Brands
Sommelier	€768	12 Sleeve Brands
Connoisseur	€1,024	16 Sleeve Brands
Party Planner	€1,280	20 Sleeve Brands

B. Common Crypto Subscriptions

Subscription Tier	Cost per Quarter	Quarterly Rewards
Starter	€2,160	8 Common Brands
Sommelier	€3,240	12 Common Brands
Connoisseur	€4,320	16 Common Brands
Party Planner	€5,400	20 Common Brands

C. Rare Crypto Subscriptions

Subscription Tier	Cost per Quarter	Quarterly Rewards
Starter	€4,800	8 Rare Brands
Sommelier	€7,200	12 Rare Brands
Connoisseur	€9,600	16 Rare Brands
Party Planner	€12,000	20 Rare Brands

D. Exotic Crypto Subscriptions

Consumers interested in signing up for Exotic Quarterly Subscriptions can only subscribe to bundles of 8, following the pairing protocols for limited Exotic Luxury Crypto Champagne bottles.

Subscription Tier	Cost per Quarter	Quarterly Rewards
Starter	€5,920	8 Exotic Brands
Sommelier	€11,840	16 Exotic Brands
Connoisseur	€17,760	24 Exotic Brands
Party Planner	€23,680	32 Exotic Brands

E. Customer Reward Tiers

Customer reward tiers bestow a wide variety of benefits and heirlooms based on the ranking that an account has unlocked from total value spent on champagne bottles within the year. If an account increases their quarterly subscription value by opting into more than one subscription, or the individual decides to purchase bottles on the marketplace, the ranking associated with the account will increase and reward further benefits than the previous tier. Each reward tier provides an ongoing discount to sleeve bottles bought, along with free select Crypto Champagne bottles.

Affiliate Ranking/Tier	Required Referrals	Quarterly Bonus Rewards	Ongoing Sleeve Bottle Discount
Bronze	€10k / year	1 Sleeve Bottle	1%
Copper	€25k / year	2 Sleeve Bottles	2%
Silver	€45k / year	3 Sleeve Bottles	3.5%
Platinum	€70k / year	3 Sleeve Bottles and 1 Common Bottle	5%
Gold	€100k / year	4 Sleeve Bottles and 1 Common Bottle	7%
Diamond	€135k / year	4 Sleeve Bottles and 2 Common Bottles	9%
Sapphire	€175k / year	4 Sleeve Bottles, 2 Common Bottles, and 1 Rare Bottle	11%
Emerald	€220k / year	5 Sleeve Bottles, 3 Common Bottles, and 1 Rare Bottle	15%
Ruby	€270k / year	5 Sleeve Bottles, 3 Common Bottles, 2 Rare Bottles, and 1 Heirloom Set (Glasses and Cork Stopper)	20%

11. CRYPTO CHATEAUX

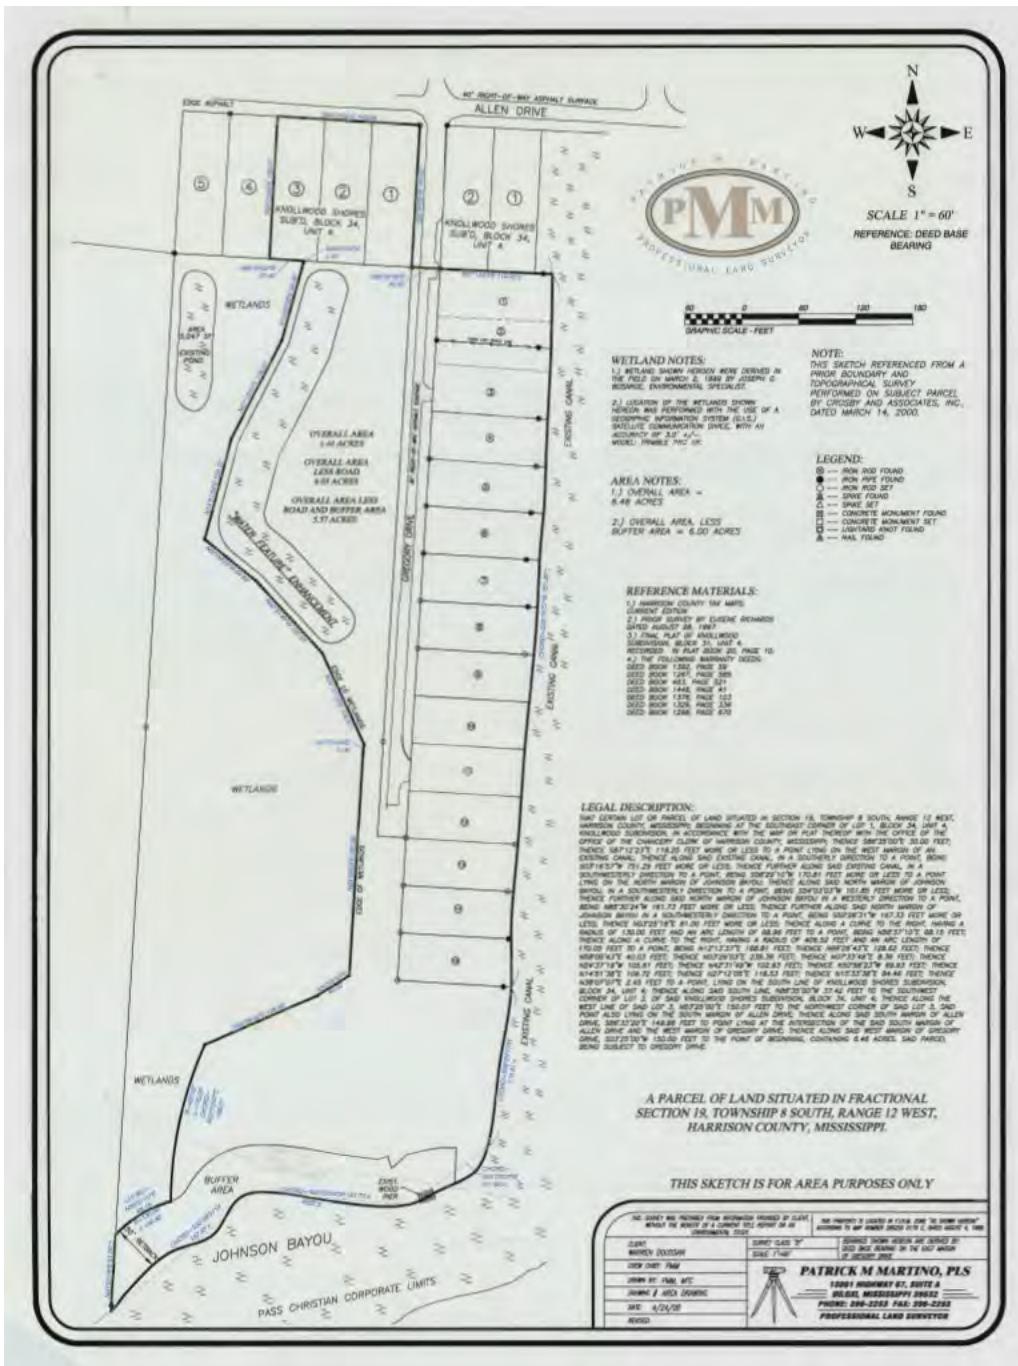

Lodging at one of Champ Association's Crypto Chateaux is only possible for \$VIGNE token holders. Additionally, all Multi-Faucet Utility Node holders receive discounts on housing and amenity expenses. As bottle threshold sales occur for Crypto Champagne, the Champ Association allocates profit to construct and maintain Crypto Chateaux locations. Each location is strategically placed across the globe to host events and provide lodging opportunities for community members of the association. There are also numerous amenities and concessions available, but the offerings of each location will vary depending on what the culture and environment of that region permits.

All service and admission fees pertaining to Crypto Chateaux locations must be paid in \$VIGNE tokens — credit/debit cards and fiat currencies can be utilized, but there will be an additional fee to contract the holding company to convert currencies to \$VIGNE for following protocols via smart contracts.

A. Planned Locations Across the Globe

Construction of the first Crypto Chateaux is set to break-ground after the third bottle threshold sale, on 7.8 acres of waterfront property, positioned off the gulf coast of Mississippi. This property has been handed-down from previous generations to one of the founder's and his brother, full of history and the perfect ambience for establishing family ties within the association. Future locations will be decided upon, by multi-faucet utility node holders of the Champ Association, via DAO voting mechanisms.

B. Booking and Accommodations

Members must book in advanced to lock-in vacation and/or work related collaboration plans because there will be limited lodging and accommodation availability as demand grows.

Crypto Chateaux locations vary in the type of events and amenities that are offered to members, but each chateau will be built to provide the following — Lodging Facilities, Conference Rooms, Public Speakeasy with Private Rooms, Basic Amenities, and Region Specific Amenities.

Lodging Facilities

Each Crypto Chateaux will be constructed with multiple wings that include different levels of housing accomodations for \$VIGNE token holders.

Conference Rooms

These private business rooms vary in size and come equip with all the necessary demonstration and presentation tools. Project development sessions and investment meetings can be held within these rooms by multi-faucet utility node holders. All unregistered members meeting for an investment opportunity must sign-in to our history ledger that is powered by the Elysium blockchain. Members will be able to reserve conference rooms for future dates or utilize any that are unrented at no cost upon arrival if some remain.

Basic and Region Specific Amenities

Each location will come equip with basic and regional amenities to ensure a proper and well-rounded entertainment and lodging experience for all members and guests: TBA

Phygital Speakeasy with Private Rooms

The phygital speakeasy is exactly what it sounds like, an ambience that combines the concepts of the “roaring twenties” and blockchain technology. This underground speakeasy is open to the public, as long as they pay an entry fee of \$VIGNE, and once inside they are given their special phygital item. The phygital item is a tangible collector’s item that has a redeemable NFT code sealed for the guest to later claim and utilize the digital asset to unlock further rewards on the Champ Association’s future DEX. Each quarter the special phygital item is changed to keep the previous items a true heirloom and enforce natural collector-edition value appreciation protocols. Additionally, there will be private rooms that can be rented-out for members to have a more reserved entertainment experience.

12. ROADMAP

Phase 1

- Whitepaper is Finalized.
- Champ Association Company Registration Complete.
- Interviewing Website and Token Contract Dev Teams.
- Development of the Website and Webshop.
- Introduction of the Node Utility Reward Program.
- Complete the Public Sale of the first Bottle Threshold.
- Labrys Creates the \$VIGNE Token Contract.
- Start Producing the Crypto Champagne Bottles Ordered.
- Start Collaborations with a Professional Marketing Team.
- Collaboration with a Professional Marketing Team.
- Audit and Deploy Token Contract of \$VIGNE.
- Generate NFTs for Vineyard Vocations.
- Airdrop All Bottle Token Rewards to Customers.
- Possibly Add Strategic Advisors and Partners.

Phase 2

- DAO Voting on New Brands being Added to the Crypto Champagne Bottle Network.
- Design All Bottles of the Newly Added Brands.
- Start Producing New Inventory for Bottle Threshold Sale 2 of Crypto Champagne.
- Open Sales for Bottle Threshold Sale 2.
- Hire Devs/Artists for Team A of the Gaming Studio.
- Game Development is Started by Team A for “Vineyard Vocations” and “Killstreak”.
- DAO Voting on Farming and Staking Pools.
- First Farming and Staking Pools Open on the DEX.
- Hire Devs/Artists for Team B of the Gaming Studio.
- Game Development is Started by Team B for “Loopkit Mansions”, “Bubblestar Express”, and “Tassels & Corks”.
- Alpha Testing “Killstreak” and “Bubblestar Express”.
- DAO Voting on 1st Champ Association Club Location.

Phase 3

- DAO Voting on New Brands being Added to the Crypto Champagne Bottle Network.
- Design All Bottles of the Newly Added Brands.
- Start Producing New Inventory for Bottle Threshold Sale 3 of Crypto Champagne.
- Open Sales for Bottle Threshold Sale 3.
- Alpha Testing of “Vineyard Vocations”.
- Beta Testing “Killstreak” and “Bubblestar Express”.
- Distribute the Accumulated Utility Rewards from the Previous Three Bottle Threshold Sales to the Multi-Faucet Utility Node Pool and Start Quarterly Distributions.
- DAO Voting on Farming and Staking Pools.
- New Farming and Staking Pools Open on the DEX.
- Final Release of “Killstreak”.
- Construction of First Champ Association Club Location.
- DAO Voting on the Second Champ Association Club Location.

Phase 4

- DAO Voting on New Brands being Added to the Crypto Champagne Bottle Network.
- Design All Bottles of the Newly Added Brands.
- Start Producing New Inventory for Bottle Threshold Sale 4 of Crypto Champagne.
- Open Sales for Bottle Threshold Sale 4.
- Final Release of “Bubblestar Express”.
- Beta Testing of “Vineyard Vocations”.
- Alpha Testing of “Tassels & Corks” and “Loopkit Mansions”.
- DAO Voting on Farming and Staking Pools.
- New Farming and Staking Pools Open on the DEX.
- Construction of Second Champ Association Club Location.
- DAO Voting on the Third Champ Association Club Location.

Phase 5

- ◎ DAO Voting on New Brands being Added to the Crypto Champagne Bottle Network.
- ◎ Design All Bottles of the Newly Added Brands.
- ◎ Start Producing New Inventory for Bottle Threshold Sale 5 of Crypto Champagne.
- ◎ Open Sales for Bottle Threshold Sale 5.
- ◎ Beta Testing of “Tassels & Corks” and “Loopkit Mansions”.
- ◎ Final Release of “Tassels & Corks”.
- ◎ DAO Voting on Farming and Staking Pools.
- ◎ New Farming and Staking Pools Open on the DEX.
- ◎ Construction of Third Champ Association Club Location.
- ◎ DAO Voting on the Fourth Champ Association Club Location.

Phase 7

- ◎ DAO Voting on New Brands being Added to the Crypto Champagne Bottle Network.
- ◎ Design All Bottles of the Newly Added Brands.
- ◎ Start Producing New Inventory for Bottle Threshold Sale 6 of Crypto Champagne.
- ◎ Open Sales for Bottle Threshold Sale 6.
- ◎ Final Release of “Vineyard Vocations”.
- ◎ Team A of the Gaming Studio will Begin Development of a New Game.
- ◎ DAO Voting on Farming and Staking Pools.
- ◎ New Farming and Staking Pools Open on the DEX.
- ◎ Final Release of “Loopkit Mansions”.
- ◎ DAO Voting on the Fourth Champ Association Club Location.
- ◎ Team B of the Gaming Studio will Begin Development of a New Game.
- ◎ Construction of Fourth Champ Association Club Location.
- ◎ DAO Voting on the Fifth Champ Association Club Location.

13. PRESALE INFORMATION

The presale will take place on <https://ChampAssociation.io/pre-order>, and payments can be made with credit/debit cards or cryptocurrency.

There are 16 brands of Crypto Champagne in the first bottle threshold sale. Each brand is limited to 1,250 luxury bottles that include a fixed amount of \$VIGNE tokens. Once the limited luxury bottle supply of the first threshold sale is sold-out, all consumers interested in obtaining \$VIGNE tokens must wait for the second bottle threshold sale. For those who wish to buy a bottle of Crypto Champagne solely to enjoy the beverage, sleeve and common luxury bottles will be available indefinitely/always because the supply of those product lines do not rebate \$VIGNE tokens to the purchaser.

Brands: Champ Association (\$VIGNE), Vulcan Forged (\$PYR), Bitcoin (\$BTC), Polygon (\$MATIC), XRPL (\$XRP), Binance (\$BNB), Ethereum (\$ETH), VeChain (\$VET), Lukso (\$LYXE), Solana (\$SOL), Dogecoin (\$DOGE), Decentraland (\$MANA), Shiba Inu (\$SHIB), and three other brands TBA.

Whitelist and Preorder Qualifications

Being that the founders of the Champ Association are deeply embedded within the communities of all the represented cryptocurrency brands supported by Crypto Champagne's first bottle threshold sale, many conversations have been held with representatives and ambassadors of the respected projects to determine which members should qualify for the whitelist round of our presale.

If you meet any of the qualifications listed below and would like to preorder one Exotic Luxury Bundle, and/or multiple Rare Luxury Bottles, then navigate to our preorder form and [follow the instructions](#).

Primary factors that were taken into consideration while defining the qualifications:

- Owner of a node within one of the supported projects.
- Ambassador members from any of the supported projects.
- Social media influencers from any of the supported projects.

Bottle Inventory

View the table below to identify the availability of each bottle-type during the first Bottle Threshold Sale:

Product-type	Available Inventory	Sale Price
Sleeve Bottles	Unlimited	€64
Common Luxury Bottles	Unlimited	€270
Rare Luxury Bottles	1,000 of Each Brand	€600
Exotic Luxury Bundles	650 Bundles (18 Different Bundle Types)	€3,700 — €5,920 per Bundle (€740/Bottle)

* All bottle prices quoted above do not include shipping, VAT, and tax related costs (these extra costs must be paid before products are shipped and will be calculated based upon the location of purchaser). You will be contacted about this later. The bottles go into production once the presale is over. The production time ultimately depends on the suppliers, but we were given an estimation of 6-8months for the presale bottles to be ready.

Customer Crypto and NFT Rebates

Sleeve Bottle Rebates

None: solely intended for the consumption of champagne, no digital assets are linked with these bottles; only luxury bottles rebate the purchaser with digital assets from the blockchain ecosystem displayed on the bottle.

Common Luxury Rebates

- 1 Common-grade Character NFT from Vineyard Vocations.

Rare Luxury Rebates

- 1 Rare-grade Character NFT from Vineyard Vocations.
- 1 Rare-grade Multiplier NFT from Vineyard Vocations.
- €50 worth of the cryptocurrency displayed on the bottle at time of purchase.
- 36,666.65 \$VIGNE tokens: €200 worth of \$VIGNE at the OTC price of Bottle Threshold Sale 1.

Exotic Luxury Rebates

- 1 Exotic-grade Character NFT from Vineyard Vocations.
- 1 Exotic-grade Multiplier NFT from Vineyard Vocations.
- €50 worth of the cryptocurrency displayed on the bottle at time of purchase.
- 48,767.07 \$VIGNE tokens: €200 worth of \$VIGNE, with a 33.33% exotic bundle bonus, at the OTC price of Bottle Threshold Sale 1.

There are 10 random exotic luxury variety bundles with a limited edition phygital item that rewards an all-expense-paid trip alongside the founders of Champ Association — the limited bundles are equally split between variety options 1 and 2, meaning there are 5 of each variety bundle that reward the limited phygital item!

Rewards for Popping Bottles at All-Time-High

If you wait until the cryptocurrency brand of the bottle that you purchased reaches all-time-high, before opening the beverage, then your digital wallet will be rewarded fifty Euros (€50) worth of \$VIGNE tokens and a special all-time-high NFT to celebrate the success. In the future, all-time-high NFTs will be eligible for bonus staking rewards by utilizing them on the DEX when applicable.

Utility Reward Distribution Protocols

Each time a single bottle is sold, the designated Euros (€) will be utilized to market-buy the cryptocurrency brand represented on the bottle to be distributed throughout the ecosystem as follows:

Entity being Rewarded	Sleeve Commision	Common Luxury Commision	Rare Luxury Commision	Exotic Luxury Commision
Multi-Faucet Utility Nodes	Sleeve = €6	Common = €10	Rare = €18	Exotic = €30
Flagship NFT Land Owners	Sleeve = €6	Common = €10	Rare = €18	Exotic = €30
Cryptocurrency Brand	Sleeve = €3	Common = €5	Rare = €9	Exotic = €15
DEX Staking/Farming	Sleeve = €3	Common = €5	Rare = €9	Exotic = €15
Affiliate (if applicable)	Sleeve = €1.50	Common = €2.50	Rare = €4.50	Exotic = €7.50
Total Utility Rewarded per Bottle-Type Sold	Sleeve = €19.50	Common = €32.50	Rare = €58.50	Exotic = €97.50
Total Revenue to Champ Association per Sale	Sleeve = €44.50	Common = €237.50	Rare = €291.50	Exotic = €392.50

Delivery of Bottles and Airdrop of Tokens

Bottles: VAT/Tax and other fees related specifically to shipping products to another region/county will be paid by the consumer separately at checkout. All luxury bottles will be delivered in 6 to 9 months from the date they are purchased, while sleeve bottles will arrive much earlier. The consumer will be able to pay extra to have any sleeve bottles ship separately when they are ready for delivery — those who do not pay the extra fee must wait for their sleeve bottles to arrive with luxury bottles.

Shortly afterwards the first bottle threshold sale is sold-out, our association will aim to ensure products are available for same-day/next-day shipping during future bottle threshold sales. Reason being that the first sale will provide the mass funding required to pre-brand hundreds of thousands of bottles. Once we have ample branded inventory, then warehouses can be filled globally.

Tokens: All utility tokens will be airdropped to the consumer's whitelisted digital wallet address after the token contract of \$VIGNE has been successfully deployed on Elysium chain and audited by numerous trusted firms. The same will apply for the utility tokens of each cryptocurrency brand that are airdropped to consumers because we will utilize a pegged form of each token on the Elysium blockchain to ultimately ensure gas remains the same for all cryptocurrency token transactions, which is greatly beneficial to the Vulcan Forged economy because each tx will utilize \$LAVA. Additionally, all NFT rebate rewards will be airdropped as soon as they are minted on Elysium chain. After the first bottle threshold sale, all corresponding threshold sale smart contracts will instantaneously airdrop rewards since they will be minted before the sale, thus leading towards an immutable and autonomous process upon each purchase.

SAFT Agreement Download and Upload Protocol

To protect the Champ Association and its affiliates from any future unwanted legal matters, please download the Standard Agreement for Future Tokens contract from our website and submit a completed copy of the document in pdf format upon check-out. Be sure to electronically sign and date the document properly while completing all required steps before saving the file as a pdf for metadata upload during check-out. All orders will be held before being processed to confirm whether or not consumer SAFT contracts are correct. This ensures all interested investors can properly lock-in their orders without having to worry about slight errors beforehand. After being notified by the foundation and given a grace period of 3-5 days to resubmit, any customers that do not rectify/fix errors will forfeit their limited package and the products will become available for purchase by other interested parties that missed-out.

Exotic Excursion Events

All bottle threshold sales will have a limited item within 2% of the Exotic Luxury Bundles available for purchase – during the presale, 5 of the 250 available Exotic Luxury Bundles will include four limited edition champagne glasses with one bottle opener.

Each customer/member that obtains the special bundle will need to post a video/image of them holding their exclusive memento via Twitter. Crypto Champagne will respond on social media to initiate the process of receiving booking information for flight and lodging accommodations. Upon arrival of event winners, the founders of Champ Association will meet everyone at the reserved 5-star hotel to give a proper introduction and become acquainted with the new members of their organization.

[View the agenda](#) that is subject to change for the first Exotic Excursion Event.

LINK DIRECTORY

All contact links and social media channels regarding the project can be found via the Champ Association Linktree.

Links will be systematically expanded as Organizations and Sub-Entities develop.

DISCLAIMER

All utility protocols (any text) and photos in this whitepaper are property of the Champ Association unless otherwise noted – permission must be given to utilize the context and any unlawful use of materials can expect legal action to take place.

Additionally, all NFTs and cryptocurrency included in bottle sales will be airdropped when products are shipped to the purchaser. We have been given an estimation of 6-8months for the presale bottles to be ready, and we will notify the community every step along the way of production.
